Guinness Global Energy Fund (the "Fund")

The Fund in the first six months of 2025 produced a total return of +5.3%. This compares to a total return of 4.6% for the Fund's benchmark, the MSCI World Energy Index (net), and the MSCI World Index's total return (net) of 9.5%.

Performance summary in US Dollars: Class Y compared with MSCI World Energy Net Return Index

Review

Over the first six months of 2025, we saw expectations develop of a looser oil market for the rest of the year than previously forecasted. The looser oil balance has been driven mainly by higher supply expectations from the Organisation of the Petroleum Exporting Countries ("OPEC") and other oil-producing nations ("OPEC+") group, who have accelerated their return of oil to the market that had been held back under OPEC's quota system. Offsetting the looser balance, heightened geopolitical tensions in the Middle East have created volatility in prices, as the market considers the likelihood of disruption to supply, especially in Iran. The Brent spot oil price has fallen by 9% since the start of the year, whilst the 5-year forward Brent oil price has fallen by 2%.

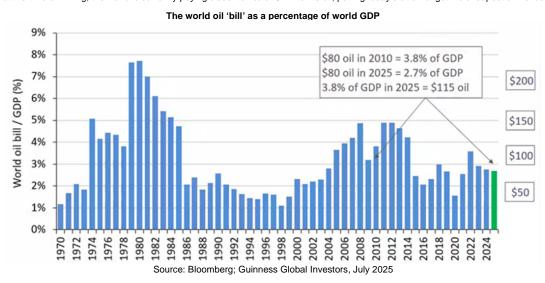

Brent spot price vs 5-year forward price (\$/bl) YTD

Source: Bloomberg; Guinness Global Investors

Global oil demand growth for 2025 is estimated by the International Energy Agency ("IEA") to be 0.8m barrels per day ("b/day") (down from the 1.0m b/day forecast at the start of the year but in line with the 0.8m b/day growth seen in 2024) with the non-Organisation for Economic Co-operation and Development ("OECD") up by 1.1m b/day and the OECD down by 0.3m b/day. The demand outlook has been impacted by geopolitical risks, especially the threat of tariffs from President Trump, where the outcome remains uncertain. Oil demand in 2025 of 103.9m b/day will be around 3.2m b/day above its pre COVID peak in 2019. Unlike previous years, China is not expected to be the dominant driver of demand growth and at only 0.2m b/day, China's demand growth is in line with that expected from India, Other Asia and the Middle East.

When writing at the start of the year about the prospects for oil demand, we placed strong emphasis on the current affordability of oil as a driver of demand growth. Globally, we believe that oil remains a 'good value' commodity. Based on Brent oil price of around \$80 per barrel ("/bl") in 2025, we calculate that the world would spend around 2.7% of GDP on oil, below the 30-year average of around 3% and well below the 3.8% seen in 2010 when oil also averaged \$80/bl. With oil trading in the mid \$60s/bl at the time of writing, the world is currently paying closer to 2% of GDP for its oil, putting today's oil amongst the cheapest of the last fifty years.

For the financial period ended 30 June 2025

Guinness Global Energy Fund (the "Fund") (continued)

Review (continued)

On the supply side, forecasts for non-OPEC supply growth in 2025 have moderated by 0.4m b/day since the start of the year, with growth of 1.7m b/day shrinking to growth of 1.3m b/day. Nonetheless, the call on OPEC+ production for the year has stayed about flat, given the reduction in demand expectations. Since May, the OPEC+ group has been raising its quotas by 0.4m b/day each month, which is expected to continue in July and August. Exports of oil in May and June have not risen by as much as these headline numbers would suggest, nonetheless it is evident that core members of the group (e.g. Saudi and Kuwait) are attempt to bring overproducers into line (e.g. Kazakhstan, Iraq), in addition to maintaining market share at non-OPEC's expense. OPEC+ continued to stress that its supply strategy could be amended at any time, should market conditions require it.

Geopolitical concerns came to the fore in June with a sharp escalation of conflict in the Middle East. On June 13, Israel commenced a bombing campaign in Iran that targeted military sites and Iran's nuclear enrichment programme. A week later, the US joined the campaign by bombing nuclear enrichment sites, in particular those out of reach of Israeli's military. With US/Israeli/Iranian tensions still present, there is concern around the accessibility of the Strait of Hormuz, a 21-mile-wide stretch of water separating Iran from the UAE and Oman. Since typically around 20% of world oil supply passes through the Strait each day, any closure or impediment would bring significant disruption to the world oil balance. The current unrest also brings continued uncertainty around the US enforcing existing sanctions against Iranian oil exports, in contrast to the last 12 months when Iranian supply has been allowed to flow to China.

Elsewhere, the US announced the cancellation of a "concession agreement" in Venezuela that allowed Chevron to produce export oil from the country. The concession had been put in place by President Biden in November 2022 and, since then, Venezuelan oil production has increased from 0.7m b/day to nearly 1.0m b/day. Seaborne crude oil exports are already falling and we expect further declines in coming months.

International and US natural gas markets have remained fairly tight so far this year, thanks largely to industrial, LNG and power demand for natural gas together with colder than normal conditions (the US suffered the coldest January in a decade). US natural gas inventories drew to 9% below 10-year average levels as the first phase of the Plaquemines LNG terminal commenced operation, consuming 2 Bcf/day of natural gas (nearly 2% of total US gas demand) and helping to lift the Henry Hub gas price to over \$4/mcf at the end of March. Milder weather has allowed inventories to rebuild since then, with the price moderating to around \$3.5/mcf by the end of June.

Similar tightening occurred in Europe where a combination of reduced Russian gas imports, colder weather, lower wind power and increased competition from Asia for Liquefied Natural Gas ("LNG") brought the largest winter drawdown in gas inventories in four years (falling to 33% full, 8ppts below the 10-year average level). By June, inventories were a little looser, but still below the long-term average. Inventory movements so far in 2025 have been in sharp contrast to the prior 24-month period during in which Europe had been successful in building a surplus of natural gas in storage. International gas prices spike briefly in June over concerns that LNG flows would be interrupted by Iran/Israel/US tensions.

Global natural gas prices (US\$/mcf)

Source: Bloomberg; Guinness Global Investors, July 2025

Portfolio Positioning

The first half of 2025 saw reasonable performance for energy equities. The sector (MSCI World Energy Index net return in USD) returned +4.6%, behind the broad market (MSCI World +9.5%). The Fund produced a total return of +5.3% (in USD).

In terms of company and sector news during the first half of the year, the most interesting developments included:

- A reset from European majors (especially BP and Shell) away from low carbon investments and towards growth in fossil fuels.
- An attractive long-term outlook for LNG demand.
- Continued efficiency improvements in US shale oil drilling, thanks to enhanced drilling programmes, lower downhole loss time, and improved
 maintenance cycles.
- A ramp in natural gas distribution activities thanks in particular to data centre demand.
- Within the Global Energy Fund over the period, stronger performers included:
- European Integrateds: seven of the top ten contributors were European integrateds, reflecting strength in broader European stock markets and a tilting
 away from low carbon investments back towards growth from fossil fuels.
- Canadian integrateds: Canadian oil benchmarks strengthened versus WTI, boosting cashflows, whilst tensions in the Middle East provided a reminder of the energy security qualities of Canadian oil supply.
- US refining: tighter refining capacity kept refining margins higher. Particular beneficiaries included Valero Energy and US major, Exxon. Sectors in the portfolio that were relatively weaker over the period included:
- Services: Large cap diversified service companies Halliburton, Schlumberger and Baker Hughes underperformed, driven by a declining US oil/gas rig count and continued capital discipline from E&Ps and integrated oils.
- US Exploration & Production: Oil producers such as Devon, Diamondback and Conocophillips tend to have the greatest operational leverage in the portfolio to oil prices. With the spot Brent price down by 9% since the start of the year, so cashflows for these companies have shrunk.

For the financial period ended 30 June 2025

Guinness Global Energy Fund (the "Fund") (continued)

Outlook

As ever, the outcomes for spot oil prices in the short term are hard to predict. What is clearer is that the incentive price for new supply has risen to around \$80/bl, which coincides with the 'floor' for oil which Saudi are looking to defend in the longer term. We see a disconnect between this longer-term floor and the oil price currently being reflected in energy equity valuations, which is closer to \$65/bl.

The IEA now estimate **oil demand** growth for 2025 of 0.8m b/day (to 103.9m b/day) with the non-OECD up by 1.1m b/day and the OECD down by 0.3m b/day. This expectation is consistent with the IMF's current global GDP growth forecast for 2025 of 2.8%. Unlike previous years, China (at +0.2m b/day) will not be a dominant driver of demand growth, with India and the Middle East expected to grow by at least as much. The IEA have recently published their first forecast for global oil demand in 2026, up by 0.7m b/day versus 2025 and taking demand to 104.6m b/day. As in 2025, all of the growth comes from the non-OECD region. And looking further ahead, even with electric vehicles approaching 25% sales penetration this year, we continue to see global oil demand growing until around 2030, reaching a peak of somewhere between 107-109m b/day, and plateauing thereafter.

OPEC+ continues to be led by Saudi, who are seeking to balance the market but also maintain market share. We see Saudi as a rational and intelligent operator in the oil market, targeting an oil price that closes their fiscal deficit (according to the IMF, Saudi require \$91/bl to breakeven this year), but one that does not stress the world economy. Saudi's sweet spot for oil, therefore, appears to be in the \$80-90/bl range. Defending an \$80 oil price in 2025 would be broadly the same in real terms as the group's actions in 2006-2008 when they defended a nominal price of around \$60/bl. The OPEC+ group are increasing their supply quotas over the summer by around 0.4m b/day per month, unwinding 2.2m b/day of voluntary cuts by key members. The main wildcard within the OPEC+ group remains Iran. Iranian oil exports are currently being allowed to flow to China, but this could reverse if tensions with US/Israel re-escalate.

Non-OPEC+ oil supply growth will continue to come through over the next few months, with Brazil, Guyana and Canada likely to be the largest contributors. US shale production growth has slowed this year, with the drilling rig count reduced since January by 11%. Nevertheless, US shale supply is still expected to increase by around 0.3m b/day, down from 0.4m b/day in 2024. Overall in the US, capital discipline and lower prices are trumping efforts from the new President to increase supply growth.

For international natural gas markets, the reduced flow of Russian gas into Europe continues to pose a challenge. Gas in storage in Europe sits today at around 80% of the 10 year average. Global demand for LNG has risen in recent months, meaning it is more difficult for Europe to attract LNG cargoes than twelve months ago. Overall, an international price range of \$9-11/mcf incentivises new US and Qatari LNG supply sources to flow, allowing Europe to displace permanently almost all its Russian gas imports. In the US, Henry Hub gas is seeing a demand boost this year from the start of those LNG export terminals. We remain cautious, however, about a material price spike, given supply at around \$4/mcf remains abundant.

Moves in energy equities so far this year have lifted the price-to-book (P/B) ratio for the energy sector at the end of June 2025 to around 1.7x, versus the S&P 500 trading at 5.2x. On a relative P/B basis versus the S&P500, therefore, the valuation of energy equities now sits at around 0.32x (down from 0.37x at the end of June 2024), and still more than two standard deviations below the long-term relationship.

We keep a close eye on the relationship between the P/B ratio for the energy sector and return on capital employed (ROCE), which historically show high correlation. ROCE for the Guinness Global Energy portfolio in 2025 (assuming an average Brent oil price of \$70/bl) will be around 9%, we think, a little below mid-cycle ROCE, which we peg at around 11%. However, current valuation implies that the ROCE of our companies will stay at about 4-5%. If ROCE remains at around 9-10% and the market were to pay for it sustainably, it would imply an increase in the equity valuation of around 30-35%:

The higher ROCE is being supported by robust free cash generation. Assuming an average Brent oil price of \$70/bl in 2025, we estimate the average free cashflow yield of our portfolio, after capital expenditure, to be around 8.4% and note that the 2025 estimated gross dividend yield of the portfolio currently sits at around 4.8%. Fixed dividends in the portfolio have generally been growing, and have ample room to run further, given the high free cashflow yield. At our long-term oil price assumption of \$80/bl, the average free cashflow yield rises to over 10%.

To consider valuation another way, we are often asked what oil price is implied in the portfolio, as a barometer of the expectation priced into the equities. At the end of June, we estimate that the valuation of our portfolio of energy equities reflected a long-term Brent/WTI oil price of around \$65/bl. If the market were to price in a long-term oil price of \$75/bl, on a one year forward view it would imply around 35% upside while there would be around 65% upside at a long-term oil price of \$85/bl Brent (which is equivalent to \$55 in 2007 prices).

For the financial period ended 30 June 2025

Guinness Sustainable Energy Fund (the "Fund")

In the first half of 2025 the Fund produced a total return (USD) of 11.66% vs the MSCI World Index (net return) of +9.47%. The Fund therefore outperformed the index by 2.18% over the period.

Performance summary in US Dollars: Class Y compared with MSCI World Net Return Index

Review

The key events that have affected the energy transition, company profitability and share price performance in the first half of 2025 are discussed below:

- The backdrop to the global energy transition in 1H'25 has been dominated by policy; with the United States delivering a disappointing downsizing of the Inflation Reduction Act ("IRA") and tariff uncertainty while Europe provided leadership and direction in the energy transition.
- In the United States, the budget reconciliation bill of May 2025 initially proposed fewer changes to the IRA than expected after President Trump's election. However, amendments by the House of Representatives in late May reduced the value of IRA credits, raising around \$570bn. The bill, which is now in the final stages of approval, eliminates electric vehicle and residential solar tax credits and speeds up the phasing out of utility solar and wind Investment Tax Credit ("ITC") and Production Tax Credit ("PTC") tax credits. On the positive side, manufacturing tax credits for battery and solar equipment will last until 2032 (beyond previous expectations) with wind credits set to end in 2027. While the new bill is less favourable for clean energy, its passing will provide project developers with the certainty needed to plan and proceed. Our dialogue with Original Equipment Manufacturers (OEMs") and developers indicate that the planning scenario for many following the Trump election was for a full repeal of the IRA and that little activity would occur whilst the bill was under consideration. With this hurdle now about to be cleared, we expect to see a resumption of activity in the US, from what we see as an encouraging base level of activity, unabated by recent policy headwinds.
- In contrast, European policy has been supportive of the Energy Transition this year. February saw the European Commission introduce the Clean Industrial Deal, a policy aimed at boosting the EU's clean manufacturing sector and industrial competitiveness by adding 100GW of renewable energy capacity annually until 2030 and making €100 billion available to support energy-intensive industries such as steel, metals, and chemicals. The deal also proposes streamlining bureaucratic processes, increasing European Investment Bank-backed guarantees for renewable energy projects, and supporting power grid manufacturers. In addition, Germany's debt brake reform (Feb'25), unlocks approximately €1 trillion in additional investment into defence, infrastructure and energy transition projects over the next decade. Importantly, the case for renewables investment in Europe has not been shaken by the Iberian blackout in April 2025, with the cause believed to be poor load control and frequency management, rather than the high share of solar (55%) deployed at the time.
- In spite of the trade and policy uncertainty, the fundamental macro backdrop in the first half of 2025 has proved to be fairly supportive of the sector. Interest rate cuts have continued in Europe, as inflation remains well under control. In the US, rates remain flat year to date at 4.5% (down ~100bps vs. Jun'24) and US Inflation has trended downwards year to date (2.3% in May'25 following a resurgence in Q4'24) creating some capacity for further interest rate cuts.
- This backdrop has been somewhat overshadowed by the uncertainty, inflationary, and recessionary pressure introduced by the swathe of tariffs threatened by the Trump administration following its "Liberation Day" announcements in April. Whilst the extraordinary headline tariffs have been delayed and reduced, uncertainty persists and some consequential tariffs will certainly be implemented. A blanket 10% universal tariff on all non-Canadian / Mexican exempted goods is in effect, alongside 50% on steel and aluminium products and 25% on cars and auto parts. Chinese goods face a 30-55% tariff, with further tariffs facing a 90 day pause following the Geneva trade negotiation in May. We are encouraged by the commentary of our investee companies, which generally operate "in-region, for-region" manufacturing strategies to minimize cross border tariff exposures.
- Despite the policy, macro and trade uncertainty, global investment in clean technologies remains on track to hit nearly \$2.2tn in 2025 (according to the IEA),
 10% more than 2024 and almost twice the spend on coal, oil and gas. Investments in power grids, renewable energy and electrified transport lead the way
 with China accounting for around a third of the total and EU (+12.4% CAGR 2019-24) and US (+9.2% CAGR 2019-24) investments also delivering resilient
 growth. Notably, this surge is occurring despite the aforementioned policy, macro and trade uncertainties, demonstrating that electricity generated from
 renewable sources like onshore wind and solar remains cost-effective versus fossil fuels.
- A key driver of the acceleration in clean technology investment, is the acceleration in global electricity demand. Having grown at 2.8%pa between 2000-23, global electricity consumption grew by an estimated 4.3% in 2024 and is expected to maintain a higher level of growth going forwards, averaging ~4%pa in 2025, and remaining at this elevated level until 2027. Importantly, load growth demand is increasingly coming from developed economies, such are the power demands of datacentres, particularly those supporting AI. The US, for example, is expected to see load growth of 2-3% in 2025, sharply higher than the 0.5% p.a. seen in the prior twenty years.
- One of the key drivers of developed market electricity demand growth is datacentres, whose owners are increasingly looking to renewables to meet their growing electricity needs, helping to drive global corporate power purchase agreement ("PPA") volumes to new highs. According to Bloomberg New Energy Finance, total signed agreements of around 60GW in 2024, up nearly 40% year-on-year. The top four buyers—Amazon, Google, Meta, and Microsoft—accounted for 40% of total demand last year. Approximately 95% of these agreements in the US were for onshore wind and solar, with predictable operating costs making them well suited for long-term contracts, offering long term price visibility to hyperscalers, a distinct advantage over fossil fuels. The increased demand has driven US PPA prices from \$25/MWh in 2019 to over \$60/MWh today, with prices exceeding \$100/MWh for some geothermal contracts.

We believe that renewables are being chosen to help satisfy this demand growth due to their speed to market, flexibility, and cost advantages over competitor technology. According to NextEra Energy, new US nuclear generation will take more than 10 years to deploy and will be the most expensive source of generation available. Meanwhile, natural gas power projects are experiencing significant cost inflation and extended build times with logistical constraints.

Within our portfolio, the top contributing segments were our electrical installation and electrification sectors, while underperforming segments included our solar/wind equipment and auto-exposed electrification names. We are encouraged at the diversity and breadth of contribution within the portfolio, with our top ten contributors equally split across US and Europe and representing all five of our master themes. Key discussion points were as follows:

Our electrical equipment companies all performed well, driven by an acceleration in global electrification activity, grid spending and, in select cases (such as Legrand), exposure to the data centre sub-sector. Top contributor SPIE delivered upgraded guidance at its Capital Markets Day and benefitted from higher German infrastructure spending.

Amphenol shares performed strongly, having materially beaten revenue and operating margins expectations in 1Q results. Amphenol's IT interconnect solutions "IT Datacom" segment delivered +134% YoY growth (reflecting data centre and AI exposure) while four of its seven non-AI end markets posted mid teens or better growth.

Deal activity remained strong within the space, with Johnson Matthey contributing well having accepted a bid for its Catalyst Technologies division for £1.8bn from Honeywell, at an implied attractive valuation of 15x TTM EBITDA. Management plan to return ~£1.4bn (60% of current market cap) to shareholders once the deal is closed.

Poorer contributors covered various themes and end markets. Enphase was directly affected by the cuts in subsidy to residential solar tax credits, Gentherm suffered from auto cycle weakness and uncertainties around Trump's tariffs while Owens Corning suffered after highlighting weakness in the North America Residential market. Ameresco was weak after management noted some uncertainty around federal government projects in its \$2.5 billion backlog of contracted projects.

For the financial period ended 30 June 2025

Guinness Sustainable Energy Fund (the "Fund") (continued)

Activity

There were 4 buys during the half (Amphenol, Carlisle Cos, Prysmian, Atlas Copco), 5 sells (China Suntien, Gentherm, Samsung SDI, TPI Composites, SolarEdge) and the portfolio was actively rebalanced.

- Amphenol is one of the world's largest designers, manufacturers and marketers of electronic connectors and sensors, selling into a range of fast-growing
 markets such as IT Datacom and Industrials and benefitting from the broader trends of electrification. The company has an excellent track record of capital
 allocation, backed by a decentralised and entrepreneurial management culture that is hyper-focused on reducing costs throughout the business. Relative to
 peers, Amphenol has demonstrated superior execution, higher margins, and better organic growth.
- Carlisle Cos is a US building products company that primarily manufactures advanced, energy efficient roofing membranes for commercial customers. We find the business offers compelling value for growth in a consolidated market with a considerable installed base. We are encouraged to see that the business derives the majority of its revenues from replacement demand and is able to pass efficiently pass through costs, helping to reduce cyclicality in the business. Carlisle is a highly free-cash flow generative business with a management team that has demonstrated impressive capital allocation capabilities and a culture of cost management.
- Prysmian is the global leader in electrical and data cable manufacturing and a key enabler of the offshore wind industry. The business operates in an attractive
 niche and provides a unique exposure to the long-term structural growth opportunity of electrification. The company has a fully booked backlog through 2029,
 providing clear earnings visibility and as such, we believe that at current valuations the company offers compelling upside with decent defensive characteristics.
- Atlas Copco is a high quality Swedish industrial selling energy efficiency products that are critical for many existing and emerging low-carbon technologies.
 Having somewhat sold off in recent months, we believe it's a compelling opportunity to purchase a high-quality compounder in a depressed cyclical sector at a reasonable valuation.
- . In April, we sold two of our positions in China Suntien and Gentherm and recycled the capital into building a full position in Amphenol.
- We sold our final small residual weighting in **TPI Composites** after concluding that the industrial and financial challenges facing the third-party wind blade manufacturer were too great and that little value would accrete to the existing equity holders. We switched our remaining holding in **SolarEdge** into **EnPhase** and exited **Samsung SDI** as we have become increasingly concerned about competition from lower cost, LFP-focused Chinese battery manufacturers.

Portfolio Positioning

At 30 June 2025, the Fund traded on a 2025/26 price to earnings ("P/E") ratio of 18.4x/15.4x. On a 12-month forward view, the Fund trades at about a 15% P/E discount to the MSCI World Index, despite consensus forecast suggesting it will deliver superior earnings growth (13.8%pa vs the MSCI World at 9.7%pa).

Valuation and earnings growth of the Guinness Sustainable Energy Fund

Source: Guinness Global Investors (30 June 2025)

The 12-month forward P/E of the Fund has de-rated against the MSCI World Index for around two years, falling from around a 40% premium to a 15% discount. This is back to the level seen in early 2020, pre the announcement of the European Green Deal, China's decarbonisation plans and the inflection in electricity demand growth and grid upgrading requirements.

Outlook

Looking to the remainder of 2025 and beyond, we expect stabilisation in the transition after an erratic first half, giving way to more benign macro and market conditions, conducive to long term growth:

- Renewable power generation is expected to grow ~1,200 TWh in 2025 (+12%), as demand from AI and datacentres increases. This is against a backdrop of US electricity demand growth of ~2-3%, following a decade ex-growth where electrification was offset by efficiency gains.
- Grid investment will increase to support the growth, growing at 15% in the US in 2025 (twice its historic rate of 7%pa) from a base of near \$90bn in 2024 Growth reflects the delivery of federal upgrade funds through the Infrastructure Investment and Jobs Act (IIJA), underlying electricity demand growth and the growing need for battery storage.
- Building efficiency and electrification will see sharply greater investment, increasing from \$340bn in 2022 to \$600bn per year from 2026-30 (10% annual growth versus a historic rate of 5%) driven by energy security, economics and tightening building standards. The EU Clean Industrial Deal (Feb'25) added various new energy efficiency targets while US policy continues to support efficiency in the construction, industrial and power sectors.
- EV sales should be around 22 million in 2025, representing around 25% of total passenger vehicle sales. Technological innovation in the space remains strong, with the first EVs able to offer recharging times competitive with ICE refuelling now being made available. Whilst China remains the only scaled market where EVs are on average cheaper to buy than comparable ICE vehicles, we continue to expect the global EV/ICE parity benchmark of \$100/kWh batter prices to be reached in 2027, supporting 50% global penetration by 2030.
- Solar remains the cheapest form of new electricity supply and we expect record low module prices in 2025 to spur growth in all major geographies with full-year global installations likely close to 695 GW in 2025, up nearly 15% on 2024. China will still represent around half of all installations with European and North America solar demand set to rise to 78 GW and 48 GW respectively, with a larger share being solar+storage deployments.
- The global **wind** industry is on track to deliver a record level of ~143 GW of installations in 2025, with China being less than half of the market. For wind equipment manufacturers (OEMs) the outlook for margins is attractive as the pricing of new order intake remains elevated while raw material costs have stabilised, potentially allowing gross margins to maintain recent higher levels in 2H 2025. US policy uncertainty has brought a lower level of new orders in the first half of the year.

The outlook we summarise here is broadly consistent with current government activity and observable investment plans. To be clear, however, the growth described falls well short of the energy transition activity needed to achieve a net zero / 1.5 degree scenario in 2050, as targeted by the IPCC and reiterated at COP28. In a net zero scenario, the deployment of renewable generation capacity, penetration of EVs and battery storage, use of alternative fuels and implementation of energy efficiency measures will need to accelerate markedly.

Catalysts for the rest of the year include the return of policy clarity in the United States as well as funding announcements related to the EU Green Deal or European energy security. The sector would also be a beneficiary of looser monetary policy, lower inflation and lower US treasury yields while higher fossil fuel prices would further improve the relative economics of renewable technologies. We expect investor interest in sustainable energy equities to recover in 2H'25 reflecting these catalysts and we expect that the current attractive valuation level will act as a catalyst as well.

We believe that the Fund's portfolio of 30 broadly equally weighted positions, chosen from our universe of around 250 companies, provides concentrated exposure to the theme at attractive valuation levels that are particularly attractive relative to consensus earnings growth expectations.

For the financial period ended 30 June 2025

Guinness Global Money Managers Fund (the "Fund")

Performance summary in US Dollars: Class Y compared with MSCI World Net Return Index

			Annual	ised		Ca	alendar years		
	6 months	1 year	3 years	5 years	2020	2021	2022	2023	2024
Fund	5.6%	27.3%	17.8%	15.2%	8.9%	42.0%	-24.1%	16.3%	23.6%
Index	9.5%	16.3%	18.3%	14.5%	15.9%	21.8%	-18.1%	23.8%	18.7%

The Fund (Class Y) in the six months to 30 June 2025 produced a total return of +5.6% (USD). This compares to the return of the MSCI World Index (net) of +9.5%.

Review

The first six months of 2025 presented investors with a reminder of markets' capacity for abrupt regime shifts. The year began with a continuation of the prior trend: moderating inflation, plus subdued but stable global growth. However, a sharp geopolitical shock in April — stemming from newly introduced tariffs on Chinese and European goods by US President Trump — created meaningful volatility in equity and currency markets.

The S&P 500 fell nearly 10% in April, while the U.S. dollar weakened materially, its worst first-half performance in over 50 years. Government bond yields spiked temporarily, led by the long end of the curve, before retracing as risk appetite returned. Gold gained over 20%, as investors sought protection from both currency depreciation and policy uncertainty.

Despite the disruption, equity markets recovered swiftly through May and June, buoyed by resilient earnings in key sectors — particularly large-cap technology — and a temporary suspension of the announced tariff measures. By the end if June, the S&P 500 and Nasdaq were again at record highs, while European and Asian equities also posted strong positive returns.

The impact of a weakening dollar was apparent in fixed income markets. Despite US real yields rising more than nominal yields over the period, global inflation-linked bonds were the top performing sector as the dollar value of international cash flows rose. Global investment grade credit also delivered strong returns, whilst US and European government bonds lagged.

Against this backdrop, the money management sector underperformed, falling behind the broad equity market and the broader financials sector.

Money management subsector performance YTD (median). Guinness selected subsectors. Source: Bloomberg; Guinness Global Investors. Total return (USD) 31.12.2024 – 30.06.2025

After exceptionally strong returns in 2024, the first half of 2025 saw a large (relative) pullback in the alternatives sector, with Blackstone (-12%), KKR (-10%) and Ares (-1%) falling out of favour. The sell-off was driven by elevated risks to earnings across realisations, transaction fees and retail flows thanks to policy uncertainty, plus elevated valuations going into the year. Management teams from the public alternative asset managers struck fairly cautious tones during earnings calls that took place in January and April, pointing to muted levels of M&A and realisation volumes. We look further at the prospects of the alternatives managers later in this note.

Amongst the large cap traditional managers, T Rowe Price (-12%) and Invesco (-8%) also struggled. T Rowe Price has lagged peers in efforts to diversify from active equities. The company does now have around \$13bn of Assets under Management ("AuM") in ETFs, but other growth areas such as private credit and wealth have been slower to develop. Invesco, meanwhile, continues to see a shift in its asset base (from active to passive) that is weighing on fee rates and net revenues.

Elsewhere, it was mixed picture in the UK asset management industry, as Liontrust (-5%) and Polar Capital (+3%) saw continued net outflows.

Strong performers in the portfolio included Italian asset managers Azimut (+37%) and Banca Generali (+25%). We continue to be attracted to the asset gathering capabilities of certain larger Italian asset managers. During the first quarter, Azimut reported net inflows of EUR2.5bn, equivalent to 3.3% of its total AuM. Flows for Banca Generali, were more muted at EUR0.5bn, but still positive.

We saw a welcome turnaround for Value Partners (+27%), which remains a leveraged play on Asian equities and benefitted from their stronger performance this year. And there was better news from Jupiter Fund Management (+30%), where slowing outflows and a successful cost-cutting drive look to be putting a floor under earnings.

It has also been pleasing to see strong performance from Franklin Resources (+21%), where a broadening of the business into alternatives is starting to bear fruit. We discuss this further below.

For the financial period ended 30 June 2025

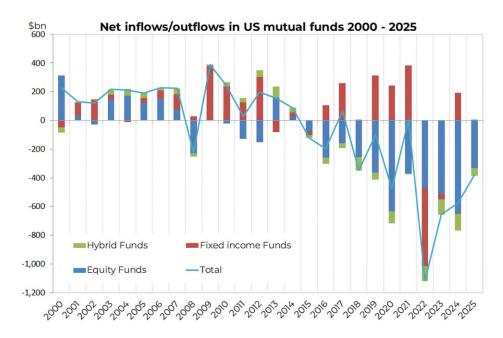

Guinness Global Money Managers Fund (the "Fund") (continued)

Activity

There were no stock switches during the period, but the portfolio was actively rebalanced.

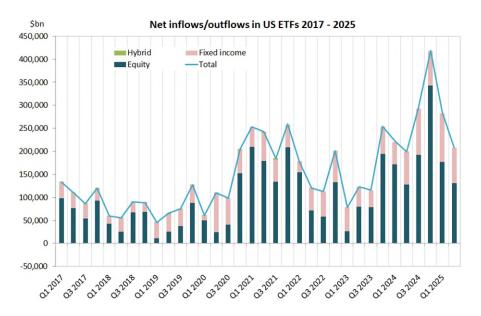

Portfolio Positioning & Outlook

Net flows from the active mutual fund sector in the US turned negative in 2022 (having been small positive in 2021), a trend that has continued in 2023, 2024 and the start of 2025. Over the last twelve months, active equity and hybrid funds have seen sharp outflows, partially offset by fixed income inflows:

Source: ICI; Guinness Global Investors

Data from the US ETF industry shows inflows across equity ETFs, bond & income ETFs and hybrid ETFs in every quarter since the start of 2017. The trend has continued into 2025, though net inflows slowed in the second quarter thanks to the volatility seen in equities.

Source: ICI; Guinness Global Investors

One of the brightest spots in the money management industry in recent years has been private markets (or alternative managers). When we started running this Fund at the end of 2010, private markets' share of global AuM was just under 7%. Roll forward to 2023, and this proportion had grown by around 50% to just over 10%.

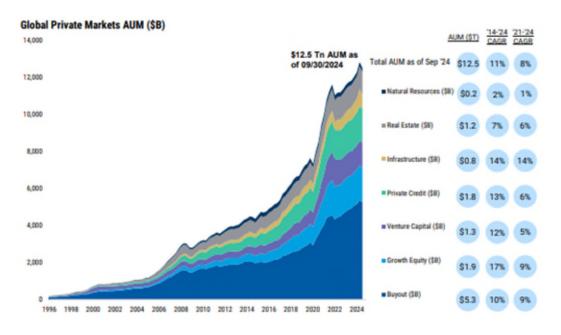

Over the last decade, total private markets' AuM has enjoyed a compound annual growth rate of around 11%. The rate of fundraising has risen sharply since 2019, with growth equity, infrastructure and the private credit sectors seeing the greatest acceleration in fund raising.

For the financial period ended 30 June 2025

Guinness Global Money Managers Fund (the "Fund") (continued)

Portfolio Positioning & Outlook (continued)

Private market AuM (\$ bn), 2000-24

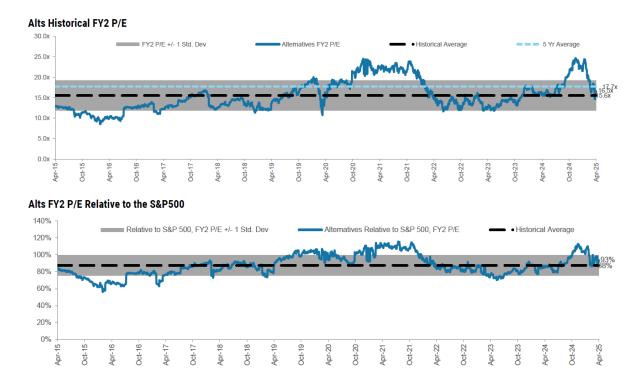

Source: Morgan Stanley

The success of alternative managers in raising and deploying capital resulted in a valuation rerating for a number of companies in the sector. Before 2018, US alternatives firms typically traded on a forward P/E of 8-12x, a discount to the S&P 500. Since 2018, the valuation range has typically been in line with the broader equity market (with a spike beyond this range in 2020 and 2021).

By the start of 2025, forward P/E multiples were looking excessive at nearly 25x earnings, and a normalisation of those multiples is one reason why the sector has underperformed this year. Today, the sector trades at around 17x forward P/E, which relative to the S&P 500, is back in line with the historical average.

US alternative managers: forward P/E ratio (absolute and relative to S&P 500)

For the financial period ended 30 June 2025

Guinness Global Money Managers Fund (the "Fund") (continued)

Portfolio Positioning & Outlook (continued)

There has been some concern in the alternatives industry that too much undeployed capital has built up on the sidelines. The sector has amassed around \$4trn of 'dry powder', of which around \$2.5trn is in private equity, \$0.9trn is in private credit, and \$0.7trn in real assets. It is important, though, to put the amount of undeployed credit into context. Relative to the growth of the overall industry, the \$4trn cash pile remains at just 31% of sector AuM, versus an historical average of around 41%:

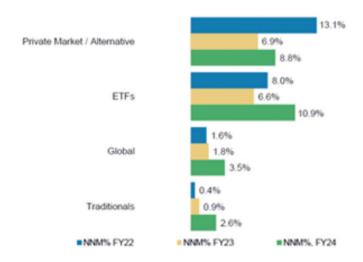

Alternatives managers: undeployed capital as % of AuM 1995-2025

Source: Morgan Stanley

By contrast to private market and ETF participants, traditional managers have seen more subdued net new money growth over the past three years:

Net new money growth by sector, 2022-24 (%)

Source: Morgan Stanley

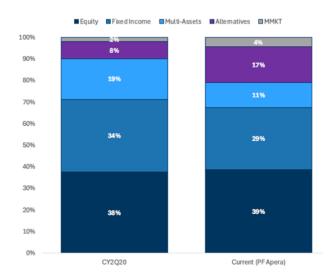

Globally, however, some traditional firms are bucking the trend. Franklin Resources, for example, which enjoyed strong equity performance over the first half of the year, is seeing an improved flows picture for traditional products, whilst gaining traction in alternative products. Indeed, over the last few years, Franklin has made meaningful progress in expanding its private markets business, with now almost 25% of management fees coming from alternatives. As the appetite for private markets products grows in the private wealth sectors, we think Franklin should be able to use its global retail distribution network to drive growth. Similar to other traditional asset managers, Franklin is priced at a single-digit forward P/E ratio, implying the expectation of earnings decline. With earnings now likely to grow, the potential for multiple expansion is significant.

For the financial period ended 30 June 2025

Guinness Global Money Managers Fund (the "Fund") (continued)

Portfolio Positioning & Outlook (continued)

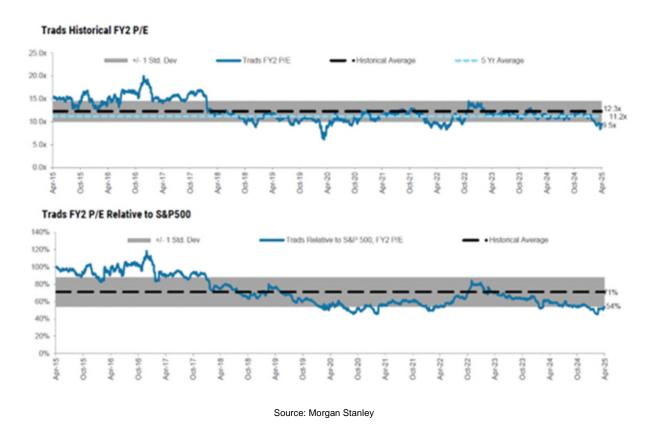

Franklin Resources: AuM by type, 2020 vs 2025

Source: Goldman Sachs

Traditional asset managers in the US continue to trade on undemanding multiples. The group currently trades at around 10x forward earnings, the lowest level since late 2022 and below the longer-term average.

US traditional managers: forward P/E ratio (absolute and relative to S&P 500)

Over the past decade, the most successful 'traditional' asset manager has been Blackrock. The company sits as the poster child for diversification, whether it be into ETFs via iShares, platform support via Aladdin, or alternatives via infrastructure and real estate. At Blackrock's latest investor day held in June, we were reassured to see strong growth expected in all of these divisions, with an overall target for operating income to nearly double from 2024 to 2030. Blackrock trades at a premium multiple to its peers, but justifiably so, in our view.

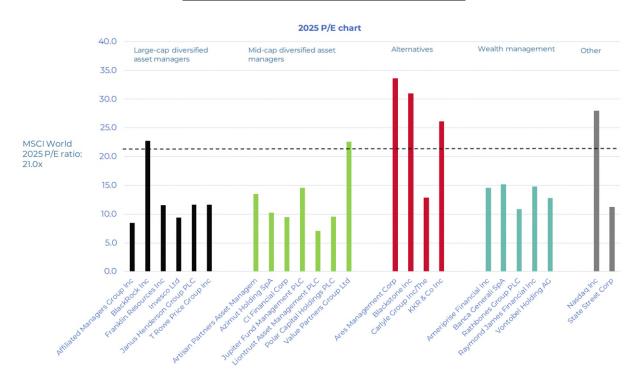

For the financial period ended 30 June 2025

Guinness Global Money Managers Fund (the "Fund") (continued)

Portfolio Positioning & Outlook (continued)

At the end of June, the 2025 P/E for the Fund was 16.2x, a 23% discount to the MSCI World P/E for 2025 which sits at 21.0x. Overall, we see stocks in this sector trading at attractive multiples, both in absolute and relative terms.

Global Money Managers portfolio: 2025 P/E ratio vs MSCI World

Source: Bloomberg; Guinness Global Investors

In the longer term we expect asset managers as a sector (and therefore the Fund) to outperform the broad market, due primarily to the ability of successful asset management companies to grow their earnings more rapidly than the broad market.

The Fund remains positioned to capitalise on the increasing value of successful companies in the sector.

For the financial period ended 30 June 2025

Guinness Global Equity Income Fund (the "Fund")

Performance summary (total return in USD): Class Y compared with MSCI World Index

			Annua	lised		Ca	alendar years		
	6 Months	1 year	3 years	5 years	2020	2021	2022	2023	2024
Fund	8.5%	13.3%	+13.8%	+13.4%	+11.5%	+22.2%	-9.3%	15.8%	12.6%
Index	9.5% nalytics (data as at 3	16.3% 30 June 2025)	+18.3%	+14.6%	+15.9%	+21.8%	-18.1%	23.8%	18.7%

The Fund's dividend yield at the end of H1 was 2.1% (net of withholding tax) vs the MSCI World Index's 1.7% (gross of withholding tax).

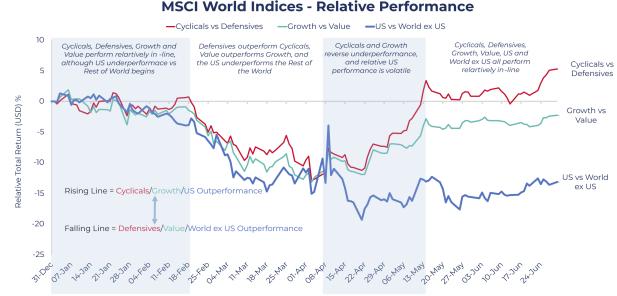

So far, in 2025, we have had dividend updates from 27 of our 35 holdings.

- 26 companies announced increases for their 2025 dividend vs 2024. The average dividend growth these companies announced was 6.7%.
- 1 company announced a flat dividend vs 2024.
- 0 companies announced a dividend cut.
- 0 companies announced dividend cancellations.

Review

The Fund in the first six months of 2025 produced a total return of 8.5% (in USD), versus the MSCI World Index return of 9.5% (in USD). The Fund therefore underperformed by 1.0%.

Source: MSCI as of 30 June 2025

For the financial period ended 30 June 2025

Guinness Global Equity Income Fund (the "Fund") (continued)

Review (continued)

Period 1 - Everything Together (31st Dec - 18th Feb)

After a shaky start in the initial weeks of 2025, US stocks outperformed in the immediate days following Trump's inauguration despite a blitz of executive orders. US outperformance was short-lived, however, as markets instead showed a preference for the value on offer in Europe, given the lack of immediate US tariffs on the region, the rising prospect of peace talks in Ukraine, and improving economic growth expectations.

Period 2 - Tariff concerns drive a regional bifurcation and a broad market sell-off (Feb 18th - Apr 8th)

The MSCI World fell ~17% between the market peak (Feb 18th) and trough (Apr 18th), with a significant bifurcation between US & non-US performance. Given weak US economic data and growing US trade policy uncertainty, investors flocked to more defensive names as cyclicals sold-off. Trump's 'Liberation Day' tariffs, far more aggressive than previously thought, caused an -11% drop in the MSCI World. Many countries announced retaliatory tariffs in the aftermath, driving worries of a full-blown trade war. Non-US stocks had held up well until this point, but were not immune to the significant sell-off that followed Liberation day.

Period 3 - A reversal in leadership as trade concerns dim and the TACO trade emerges (Apr 8th - May 14th)

Areas of the market that experienced the sharpest declines in the prior period, rebounded the strongest, as Cyclical and Growth orientated stocks outperformed their Defensive and Value counterparts. The MSCI World rallied +6.5% on the 9th April after a de-escalation in the trade-war as Trump announced a 90 day pause on reciprocal tariffs. Markets continued to rally in the weeks that followed.

Period 4 - Everything together...again (May 14th - June 30th)

Equities rallied over the remainder of the quarter, holding up despite a number of significant macro-events that had the potential to derail momentum. Interestingly, factors and regions largely moved in-line with each other from 14th May onwards. Even as the 'Big Beautiful Bill' drove concerns over fiscal irresponsibility, a rising debt burden, the escalation of events in the Middle East, equities held up well.

In H1 2025, the Fund's performance versus the MSCI World Index can be attributed to:

- The large overweight allocation to Industrials (23.9% vs 11.1% for the index) and the smaller overweight allocation to Financials (17.0% vs 16.8% for the index). Both acted as a tailwind as these were the two best performing sectors year to date returning +17.9% and +17.0% (in USD).
- Additionally, the zero weight allocation to Consumer Discretionary, Energy, and Real Estate was a tailwind as these were the three worst performing sectors year to date.
- However, the Fund has an underweight allocation to Communication Services (2.5% vs 8.2% for the index) and a zero-weight allocation to Materials & Utilities. This was a drag to performance as all three sectors outperformed the benchmark posting gains of +13.9%, +10.6% and +16.4% (in USD) respectively.
- From a stock selection perspective, weaker performance from the Fund's Industrials (Illinois Tool Works, Paychex, Assa Abloy) and Consumer Staples (Diageo, PepsiCo) was a drag to performance. However, this was offset by strong performance from IT (Broadcom, Cisco), Healthcare (Roche), and Financials (Deutsche Boerse, CME Group).

Activity

Over H1, we sold our position in **Sonic Healthcare** and, as part of our one-in-one-out process, we initiated a new position in **Haleon**. Our sector allocation has not changed, as we sold one Healthcare stock and replaced it with another. We have switched from holding a company listed in Australia to one based in the United Kingdom. That said, both names have internationally diversified revenues so the underlying changes in the geographical positioning of the Fund are relatively lower.

Sonic Healthcare

Sonic Healthcare, a provider of clinical laboratory testing, has been through a challenging period as it transitioned from pandemic-driven operations back to its core business activities. Following the COVID-19 boom, Sonic retained much of its workforce and diagnostics infrastructure, which increased its cost base and led to earnings falling below consensus expectations previously. Margin pressure was further compounded by Sonic's reinvestment of pandemic-era supernormal profits into strategic initiatives, the benefits of which are yet to materialise. Management sought to actively address these challenges through a cost-cutting programme aimed at restoring its margin profile. Although the latest set of results indicated that expenses as a percentage of sales were starting to move in the right direction as we had expected, this was not translating to share price performance, likely as a result of prolonged negative investor sentiment. We are also concerned by the declining quality of the business; in 2024, cash flow return on investment declined for the second year running, dropping further below our 10% threshold. We still view Sonic as a business with exposure to structural growth drivers such as population growth and aging demographics. However, we lost confidence in their ability to arrest the decline in margins, and thus to higher returns on capital we seek. Consequently, we saw a better opportunity elsewhere and decided to exit the stock.

Haleon

We replaced Sonic Healthcare with a full position in Haleon, a UK-listed consumer health company consisting of strong brands such as Voltaren, Sensodyne, and Centrum. Haleon is the second-largest player in the market behind Kenvue, but it is the leader in the categories in which it competes. Haleon offer a range of products across oral health, over-the-counter medication, and vitamins and supplements. The business is geographically diversified with around two-thirds of sales from developed markets. The remaining exposure to emerging markets is expected to support strong organic growth, with demand driven by the developing middle class and increasing consumer purchasing power in these countries. Haleon is also diversified across categories, with each one exposed to several compelling growth drivers, such as premiumisation and penetration opportunities in sensitivity toothpaste. The company has a history of successfully lobbying for a drug to be moved from prescription-only to being available over-the-counter, which improves consumer access to drugs and continues to be a source of potential sales growth for Haleon. We believe Haleon can sustain its position as a frontrunner with its strong track record and relationships with healthcare professionals creating high barriers to entry. Consumers are typically less cost sensitive when purchasing healthcare products, plus brand recognition creates strong pricing power for the company. This makes Haleon more economically resilient and strengthens its robust margin profile. The business has strong cash flow generation, which supports a c.1.7% yield, with one-year dividend growth of 10%. Given 35% cash flow return on investment, strong margins, and leading positions in categories with structural tailwinds, we see the stock as an attractive holding for the Fund.

Portfolio Positioning

We continue to maintain a fairly even balance between quality defensive and quality cyclical/growth companies. We have approximately 45% in quality defensive companies (e.g., Consumer Staples and Healthcare companies) and around 55% in quality cyclical or growth-oriented companies (e.g., Industrials, Financials, Information Technology).

Whilst the defensive names tend to have lower beta and hold up better when markets are falling, the cyclical holdings allow the Fund to maintain performance when markets are rebounding and rising. We believe that within these more cyclical sectors we are owning the 'quality' businesses. All the companies we seek to invest in have strong balance sheets and a history of performing well in difficult market environments. Within Financials, for example, whilst we do not own any banks, which helps to dampen the cyclicality of our Financials, we do own exchange groups such as CME and Deutsche Boerse (which do well in periods of market volatility as volumes tend to increase, resulting in higher revenues).

The Fund also has zero weighting to Energy, Utilities, Materials, and Real Estate. The largest overweight is to Consumer Staples.

In terms of geographic exposure (shown below), the largest difference between the Fund and the benchmark is our exposure to the US (as measured by country of domicile). The Fund at H1 end had c.57% weighting to North America, which compares to the index at c.74%.

The largest geographic overweight remains Europe ex-UK and the UK, though we are diversified around the world with 57% in the US, 38% in Europe and 3% in Asia Pacific (one company listed in Taiwan - Taiwan Semiconductor Manufacturing).

Outlook

The Fund tends to trade at a discount to the broader market and, at the end of the first half of the year, this was the case with the Fund trading on 20.5x 2025 expected earnings; a modest 2.4% discount to the broader market.

For the financial period ended 30 June 2025

Guinness Global Equity Income Fund (the "Fund") (continued)

Outlook (continued)

Despite the valuation discount on a PE basis, the Fund has companies which are on average far better quality with a higher dividend yield. At the end of H1 the Fund's average return on capital was at 21.4% vs 9.4% for the Index and the Fund also commanded a respectable dividend yield premium of ~24%. The Fund continues to hold consistently highly profitable companies with strong balance sheets and pricing power to pass on higher costs. We believe there is a strong case for dividend investing in general, and particularly given uncertain growth environments such as the one we are experiencing today. Further, we believe that sustainable and growing dividends may offer better opportunities than a 'high yield' dividend approach, as 'high yield' stocks can often be in more economically sensitive sectors, or sectors with greater regulatory influence, which have historically performed poorly in recessionary-type environments.

As ever, we believe our unchanging approach of focusing on quality compounders and dividend growers should continue to stand us in good stead in our search for rising income streams and long-term capital growth.

For the financial period ended 30 June 2025

Guinness Asian Equity Income Fund (the "Fund")

Performance summary in US Dollars: Class Y compared with MSCI AC Asia Pacific ex Japan Net Return Index

			Annuali	sed		Ca	alendar years		
	6 months	1 year	3 years	5 years	2020	2021	2022	2023	2024
Fund	15.0%	23.7%	11.9%	11.4%	8.1%	11.1%	-16.8%	12.7%	12.8%
Index	14.1%	15.8%	9.7%	7.1%	22.4%	-2.9%	-17.5%	7.4%	10.2%

Year to date, the Fund rose 5.1% (Y share class, in GBP) outperforming the MSCI AC Asia Pacific ex Japan Net Total Return Index benchmark which rose 4.1%. The Fund distributed an interim dividend for the first half of 2025 of £ 0.2564, which is 36% higher than the 2024 equivalent dividend.

Review

We start the review with a note on our benchmark change from the MSCI AC Pacific ex Japan Net Total Return Index, to the MSCI AC Asia Pacific ex Japan Net Total Return Index. When the Fund was initially launched over a decade ago, we did not have access to the Indian market. As such, our chosen benchmark at launch was the MSCI AC Pacific ex Japan Net Total Return Index- an index that did not allocate to India. We eventually gained access to the market in 2019, and given that the MSCI AC Asia Pacific ex Japan Net Total Return Index has become more widely used by our clients, we believe this is now the more appropriate benchmark for the Fund. Importantly, we note that there is no impact of this change to our investment process as we do not allocate by reference to index weightings.

There has been no shortage of market volatility in the first half of 2025, with a combination of unpredictable policy signals and unstable geopolitics that have kept markets on edge. US political decision-making this year has created widespread uncertainty.

From a trade perspective, we have seen US tariff escalations as an attempt to force trade renegotiations with trading partners. Sharp market reactions led to a 90 day pause on these new tariffs until 9th July, with claims from the Administration that they would reach "90 deals in 90 days". These claims of have proven to be untrue, with Scott Bessent, the US Trade Secretary, recently noting that they expected 12 trade deals to be completed during the initial pause, and now the implementation date of these new tariffs has been delayed for a further month until 1st August. China was the sole country who was not party to the tariff pause. Instead, high tariffs announced for China resulted in a retaliatory tariff war. At the peak, the US imposed 145% tariffs on Chinese goods whilst China imposed 125% tariffs on American goods. De-escalation efforts in May resulted in the US lowering tariffs down to 30% and China lowering theirs to 10%, followed by further agreements related to non-tariff measures in June, including China lifting restrictions on certain rare earth exports.

On foreign policy, the US is increasingly engaging with and aligning with parties involved in the continued unrest in the Middle East. On the domestic front, we have seen the passing of Trump's Big Beautiful Bill, creating a permanent extension of Trump's 2017 tax cuts, reducing Medicaid spend and phasing out renewable energy tax credits, whilst increasing spend related to immigration enforcement and defence. According to estimates released by the Congressional Budget Office, the passing of the Big Beautiful Bill is expected to increase the fiscal deficit by \$2.4tn over the next ten years (made up of a \$3.7tn revenue reduction, partially offset by a \$1.3tn reduction in outlays).

As a result, the longstanding dominance of US-driven market performance is increasingly being challenged by a more regionally distributed investment dynamic. Some of the reasons for this includes investors seeking to diversify income streams away from a weakening USD, and viewing other regions as more attractive on a valuation basis. This has led to outperformance in Europe and Asia versus the US on a year-to-date basis.

Source: Bloomberg, MSCI. Net returns in US dollars as of 30 June 2025

Within Asia, performance in the first half of 2025 was driven by Korea, where the political environment has finally stabilised after months of political uncertainty following an attempt at imposing martial law by impeached president Yoon Suk Yeol. Hong Kong, Singapore and China also contributed to outperformance. In China, there was a tech-driven rally at the beginning of the year, led by the initial Deepseek surprise in January, and followed by growing interest, not just in Chinese Al, but in broader Chinese technological innovations. This rally saw a sharp end at the start of the US-China tariff war but has mostly recovered as trade relationships improved and tariffs were lowered.

In Thailand, slowing consumption, weaker tourism, and concerns of US tariff impact have led to weak market performance. Household debt is now around 90% of GDP, limiting domestic consumers' ability to spend. Foreign investment continues to exit despite the government's attempts to stabilise the market through the launch of the Vayupak Fund in August 2024, which has the ability to allocate across different asset classes. At inception, over half of the Fund's resources was allocated to SET50 Index stocks (the top 50 companies listed on the Stock Exchange of Thailand) but the market has continued to fall, giving investors cause for concern. Additionally, at the end of June a leaked phone call between the Thai Prime Minister Paetongtarn Shinawatra and Cambodian Senate President Hun Sen sparked public outrage, leading to accusations of compromising national interests, and the eventual suspension of Paetongtarn from office.

Activity

There were no changes to the portfolio during the period.

Portfolio Positioning

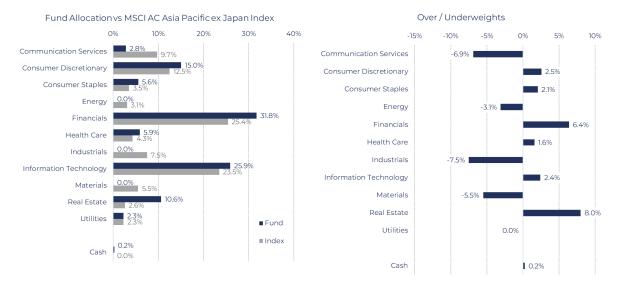

The largest country exposures in the Fund are to China at 34%, followed by Taiwan at 20% and Australia at 11%. With the change in benchmark, the Fund is now overweight in China by 7% and underweight India by 15%. Our allocation to Singapore continues to be 5% overweight versus the benchmark, whilst our allocation to Korea is 8% underweight. We also have 8% of the Fund allocated to US listed companies which are able to generate at least half of their revenues from Asia. These companies are Aflac (an insurance company), Broadcom, and Qualcomm.

For the financial period ended 30 June 2025

Guinness Asian Equity Income Fund (the "Fund") (continued)

Portfolio Positioning (continued)

The chart below shows the Fund's sector exposures:

Sources: MSCI, Bloomberg, Guinness Global Investors. Data as of 30 June 2025

As a reminder, we do not hold the big technology or e-commerce names that dominate the Chinese benchmark because they either do not pay or only pay a small dividend

The three largest sector exposures are the 32% weight in Financials, 26% in Technology and 15% in Consumer Discretionary. All three are overweight against the new benchmark by 6%, 2% and 3% respectively. We also have 11% in Real Estate, making it 8% overweight, of which 7% is in Real Estate Investment Trusts (REITs). The biggest underweights continue to be in Communication Services, where key benchmark names do not fit the Fund's preferred dividend profile, and in Materials and Industrials where we have no exposure.

Outlook

Global politics and economics will likely continue to be complex and unpredictable through the second half of 2025. USD has remained weak relative to recent history, and investors are looking beyond the US for returns.

Both Asia and China are attractive diversification options for those looking to shift away from a heavy US-centric portfolio. Our benchmark index, the MSCI AC Asia Pacific ex Japan has a 0.65 correlation with the S&P 500, and unsurprisingly, the MSCI China A Onshore Index correlation with the S&P 500 comes in even lower, at 0.33.

From a valuation perspective, Asia, and particularly China, look like attractive regions, where we continue to see plenty of opportunities. As such, we believe investors looking for regional diversification at attractive valuations will almost certainly be considering Asian markets. However, we remind readers that not all value opportunities are the same.

For us, this means whilst we continue with our value discipline, our focus remains on looking for cash-generative, quality businesses that are able to operate through tough periods of economic cycles. To the end of June, this has resulted in 2025e P/E valuation of the Fund coming in at 12.3x, an 18% discount to the benchmark, whilst reporting a historic ROE of 16% vs the benchmark's 12%.

For the financial period ended 30 June 2025

Guinness European Equity Income Fund (the "Fund")

Performance summary in US Dollars: Class Y compared with MSCI Europe ex UK Net Return Index

			Annualis	ed		Cal	endar years		
	6 months	1 year	3 years	5 years	2020	2021	2022	2023	2024
Fund	24.0%	21.9%	19.3%	13.7%	3.3%	16.4%	-14.9%	24.2%	3.1%
Index Source: FE data.	24.2%	17.9%	17.9%	11.9%	10.9%	15.7%	-18.0%	21.7%	0.2%

During the financial period, the Fund produced a total return of 24.0% (in USD), versus the MSCI Europe ex UK Index return of 24.2% (in USD). The Fund therefore underperformed by +0.2%.

Dividend

The Fund went ex its interim dividend on 1 July 2025. As things stand we have a pretty clear picture of the Fund dividend for the year ahead (July 25 and Jan 26 payments); as we have just five companies outstanding with smaller second / interim dividends still to be confirmed. Of thirty portfolio holdings twenty-four look set to have grown their dividends YoY, four have held their dividend flat (Deutsche Post, Melexis, Capgemini and EssilorLuxottica) and two paid a reduced dividend YoY in 2025, namely Salmar and Kaufman & Broad. In our view this is acceptable as we continue to have confidence in both company's underlying quality and long-term drivers, and with the dividend in both cases linked to earnings and not professed to be progressive. Overall, leading to average local full year currency dividend growth of low to mid-single digits as things stand.

Review

In Q2 2025 European markets continued to benefit from relatively lower levels of inflation vs the US; enabling the ECB to continue on its rate cutting path. Since the peak in June 2024 the ECB has now reduced its deposit facility eight consecutive times to a rate of 2.0% as of 5 June, and looks likely to remain on hold for the foreseeable future. If required, the ECB has room to make further interest rate cuts towards the 1.5% level as it sees headline inflation slowing to its 2% goal in mid-2025 and to 1.6% in 2026, and sees core inflation settling at 1.9% in 2026 and 2027 vs 2.4% today. All helped by three main disinflationary factors resulting from Trump's policies: namely falling energy input costs, the possible diversion of cheaply priced Chinese goods to Europe, and a stronger Euro reducing the cost of imports and acting as a break on activity by increasing the cost of exports. Looking further out the combination of renewed fiscal stimulus (from Germany) and stubbornly high levels of wage inflation within services, in turn driven by all time low unemployment of 6.2% in April, weak demographic trends and the structural shortage of labour, could limit ECB flexibility at the lower bound. On the other hand this also suggests higher real incomes and, in conjunction with high savings rates (of 15.2% vs 4.3% in the US), robust household spending.

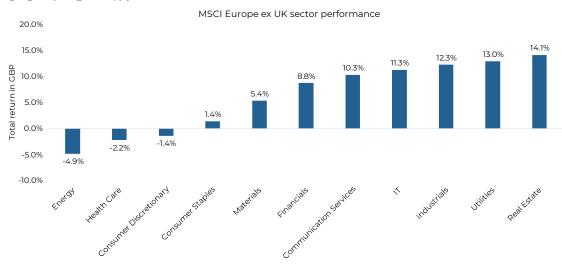

Germany's fiscal headroom stands in stark contrast to the US. As our CIO Edmund Hariss and the Asia team comment, the US is currently debating its One Big Beautiful Bill Act which looks set to increase the deficit by \$4 trillion over the next 10 years through the renewal of Trump's first term tax cuts. Simultaneously the US government's refinancing requirement for the coming year is just over \$9 trillion and the incremental borrowing requirement is around \$2 trillion. The annual lifting of the debt ceiling without spending discipline no longer appears tenable, and the bond market constrains every move of the administration. By contrast Germany benefits from a relatively accommodative fiscal position. With German debt % GDP rising from the current ~62% of GDP to approximately 70% of GDP through 2030 according to JPM estimates, under new borrowing rules negotiated by incoming Chancellor Friedrich Merz (which have enabled €1trn of stimulus for Defence and Infrastructure spending over the next ten years). Levels that are still far below US government debt % GDP even as of today.

The risk of tariffs of up to 50% on the EU as of 9th July vs the current 10% level appears to have shifted to up to 30% from August, but negotiations are ongoing, and a pragmatic European Commission may reach a preliminary agreement with the US ahead of that date. The EC continues to view US demands as vague and excessive considering Europe's overall small trade surplus with the US once services are included (just €48bn or ~3% of total EU US trade of €1.6trn in 2023). Something that could easily be ironed out with additional purchases of US natural gas and agricultural products. However Trump's ire also focuses on so called non-tariff barriers such as VAT, the EU's digital services tax (3% levy) and overall regulatory zeal on US product exports.

In the face of US tariffs and the related risk of Chinese overcapacities flooding Europe and other non-US destinations, we would expect the EU to continue to display an improved esprit de corps along with moves to drive greater internal demand through industrially focused fiscal policy, like Germany's €1tm stimulus, and other regulatory and financial measures such as the Savings and Investments Union. The opportunity is significant; the IMF estimates that Europe's internal barriers are equivalent to tariffs of 45% on manufacturing and 110% for services, and trade across EU countries is less than half the level of trade across US states. Private households hold approximately one third of their financial assets in cash. Mobilising just 5% of that for investments would free up some €1.8tm or ~11% of GDP.

Fund sector attribution analysis

Over the **second quarter**, sector performance was driven by a combination of continued falls in interest rates, a resurgent Euro and fiscal stimulus from Germany focused on Defence and Infrastructure. In this environment leveraged and domestically focused sectors (including Real Estate, Utilities, Defence within Industrials and Communication Services) led the way. Technology however was also strong helped by improving China US trade negotiations. Energy and Healthcare remained weak amid ongoing adequate global supply for the former and the threat of US tariffs for the latter.

For the financial period ended 30 June 2025

Guinness European Equity Income Fund (the "Fund") (continued)

Review (continued)

Fund sector attribution analysis (continued)

At Fund level Technology, Financials and Industrials led performance; led by semiconductor holdings Melexis and BE Semiconductor amid continued strong numbers from US peers, improving China US trade negotiations and potential for European manufacturers to benefit in the event of restrictions on the sale of advanced US equipment China. In Financials our long-standing insurance holding Mapfre continued its strong run helped by a sharply improved backdrop in LATAM. While in Industrials new Fund holding Spie did well amid an improving outlook for electrical infrastructure spending notably in Germany, and Legrand traded well amid continued strong global capex for data centres. At the other end of the spectrum Salmar and Healthcare names were the weakest performers amid the threat of US import tariffs.

Stock attribution

The best five performing stocks over Q2 were **Melexis** +45.1% in EUR, **BE Semiconductor** (purchased 15th April) +36.4%, **Mapfre** +25.5%, **Spie** (purchased 15th April) +23.4% and **Legrand** +19.1%.

The worst five performing stocks over Q2 were Salmar -12.8%, EssilorLuxottica -10.8%, Roche -9.0%, Nestle -6.5% and Novo Nordisk -6.4%.

Activity

In Q2, on 15 April the Fund made two portfolio changes. Buying **BE Semiconductor** (Netherlands) against the sale of **TietoEvry** (Finland) in the Information Technology sector, and acquiring **Spie SA** (France) against the sale of **ABB** (Switzerland) in the Industrials sector.

Fund sector exposure is therefore broadly unchanged while geographic exposure to France rose to a 13% percent overweight, and overweight exposure to Finland fell to 5% from around 8%. The changes resulted in an overall improvement to the quality and growth metrics for the Fund while valuation and dividend metrics remained broadly unchanged.

Portfolio Positioning

The strategy continues to hold no exposure to highly cyclical areas such as mining and oil or regulated ones including utilities, telecoms and banks. Few companies from these sectors make it into our universe due to our focus on quality and persistent high cash returns. **Industrials, Consumer Staples**, and **Financials** (exchanges, insurers and wealth managers) remain our main sector overweight holdings. Leaving the Fund well balanced between quality defensives (~45%) and high-quality cyclicals. The Fund only has a small +1% overweight to the IT sector, but nearly all the companies held in the Fund are notable for their **best-in-class use of technology**, in particular our overweight Industrials sector is focused almost entirely on globally leading **industrial technology** and **automation** which looks well placed for the decade ahead.

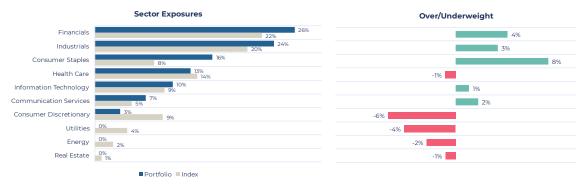

Figure 4: Sector over/underweight % breakdown of the Fund versus MSCI Europe ex UK Index. Guinness Global Investors, Bloomberg (data as at 30 June 2025).

Outlook

At the end of H1 2025, the Fund was trading on 2026e PE ratio of 15.3x (vs MSCI Europe ex UK index at 14.5x), a slight premium to the index, but broadly inline with historic levels of valuation. By contrast valuations of US assets versus Europe and other regions remain close to all-time highs, as does the US share of MSCI World at >70% vs a 50-year average of close to 50%. While Europe's share of MSCI World lies around all-time lows of approximately just 17% vs a historic average of close to 30%. Heightened uncertainty around trade policy, foreign taxes and US financial health stand a good chance of at least partially redressing the balance. Particularly given the size of US markets relative to ex-US regions, small shifts can result into meaningful overseas flows.

We can offer little insight into Trump, Xi or Putin's next moves, but against such an uncertain and political backdrop we continue to view the portfolio as well placed. Focusing on resilient, scalable, cash generative companies with long histories of generating persistent high returns on capital alongside balance sheet strength and structural growth drivers. Most of the portfolio comprises either European domestic facing companies or globally focused businesses with predominantly local to local business models. Namely companies that are decentralised and close to their customers, producing for and serving them locally. With clearly identifiable barriers to entry, whether that be via scale, intellectual property, network effects, switching costs or regulation. The thirty stock equally weighted portfolio is well balanced between defensives (45%) and quality cyclicals (55%) and diversified across a broad spread of quality sectors, industries and end markets. Offering a concentrated exposure to high quality, cash generative companies, trading at attractive valuations with a sustainable dividend yield and good potential for dividend growth – whilst also offering shelter from uncertainties emerging from across the pond.

For the financial period ended 30 June 2025

Guinness Global Innovators Fund (the "Fund")

Performance summary in US Dollars: Class Y compared with MSCI World Net Return Index

			Annuali	sed		Ca	lendar years		
	6 months	1 year	3 years	5 years	2020	2021	2022	2023	2024
Fund	10.1%	11.3%	22.3%	15.1%	36.3%	21.5%	-29.6%	40.0%	19.7%
Index	9.5%	16.3%	18.3%	14.6%	15.9%	21.8%	-18.1%	23.8%	18.7%

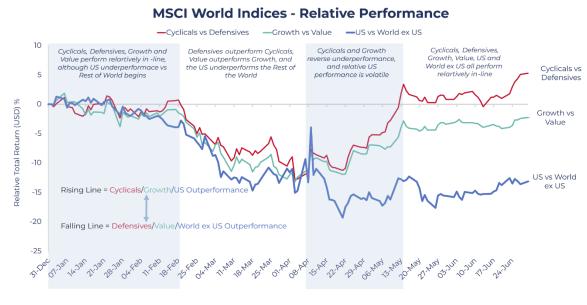

Review

The Fund in the first six months of 2025 produced a total return of 10.1% (in USD). This compares to the return of the MSCI World Index net return of 9.5% (in USD). The Fund therefore outperformed by 0.6%.

H1 2025 was largely characterized by uncertainty and volatility, driven by US trade policies. The quarter commenced with the announcement of sweeping tariffs, with the abrupt policy shift triggering a sharp sell-off in equities. However, markets rebounded swiftly following the US administration's decision to pause the tariffs to facilitate negotiations. Despite this uncertainty, strong corporate earnings and steady economic indicators restored investor confidence, with global equity markets finishing the quarter in positive territory.

MSCI World Indices Total Return - Regional

Source: Guinness Global Investors, MSCI

For the financial period ended 30 June 2025

Guinness Global Innovators Fund (the "Fund") (continued)

Review (continued)

Period 1 – Everything Together (31st Dec – 18th Feb)

Equities had a shaky start to the year, but mid-January inflation data caused the US to gain momentum. US outperformance soon faded after Trump's inauguration, with the market then showing a preference for Europe given the lack of immediate tariffs on the region and improving economic growth expectations.

The Fund slightly underperformed in this period, due to its overweight position to Information Technology and stock-specific weakness in Healthcare (e.g. Danaher and Novo Nordisk). This outweighed gains from Communication Services names like Netflix and Meta.

Period 2 - Tariff concerns drive a regional bifurcation and a broad market sell-off (Feb 18th - Apr 8th)

This period saw significant bifurcation between US and non-US stock performance. Weak US economic prints drove stagflation concerns, which were then amplified by increasing uncertainty over US trade policy. Investors rotated towards more defensive areas of the market as cyclicals sold-off. The MSCI World dropped further on Trump's 'Liberation Dav' tariff announcements, with non-US stocks also falling on fears of a global trade war.

Fund underperformance during the period was mainly driven by its overweight to Information Technology and zero-weighting to more defensive areas of the market, such as Consumer Staples.

Period 3 - A reversal in leadership as trade concerns dim and the TACO trade emerges (Apr 8th - May 14th)

Between 8th April and 14th May, the hardest-hit areas of the market rebounded strongly, with Cyclical and Growth stocks outperforming Defensive and Value. After Trump's 'Liberation Day' sell-off, the MSCI World surged +6.5% on 9th April, following a trade-war de-escalation. Trump announced a 90-day pause on reciprocal tariffs for nations willing to negotiate and avoid retaliation. Markets continued to climb as Trump reversed several trade measures.

This gave rise to the "TACO trade" theory:

"The recent rally has a lot to do with markets realising that the US administration does not have a very high tolerance for market and economic pressure, and will be quick to back off when tariffs cause pain. This is the Taco theory: Trump Always Chickens Out."

- Robert Armstrong, Unhedged Column, FT.

Whether a real retreat or a negotiation tactic, markets appeared desensitised to Trump's extreme threats, lowering risk premiums and lifting equities.

Fund performance: The Fund saw strong outperformance during the period, as the headwinds that impacted the Fund during 'period 2' fully reversed and acted as tailwinds to relative Fund performance during 'period 3'. In particular, the Fund's overweight to Information Technology, and zero-weighting to Consumer Staples, Utilities, Energy, Real Estate and Materials all acted as tailwinds for relative Fund performance. Fund performance was supported further by strong stock selection, particularly within Communication Services (Netflix) and Health Care (Siemens Healthineers and Danaher).

Period 4 - Everything together...again (May 14th - June 30th)

Equities rallied through the rest of the quarter, weathering several major macro-events that could have disrupted momentum. From 14th May, coinciding with the US-China trade truce, a key 'TACO' event, factors and regions performed broadly in-line. With earlier equity weakness mostly reversed, this reflected a market pricing in a more balanced outlook: lower trade disruption risks, contained inflation, and improving global growth expectations. Markets were optimistic that worst-case trade scenarios could be avoided but cautious ahead of early July trade deadlines. Other risks also emerged: concerns over fiscal irresponsibility from the 'Big Beautiful Budget bill', Middle East tensions between Israel and Iran threatening supply chains, and renewed pressure from Donald Trump on Fed Chair Jay Powell to cut rates. Despite all this, equities held up well.

Fund performance: The Fund saw slight outperformance in the final weeks of the period, driven by a positive allocation effect. The Fund's overweight to Information Technology and zero weighting to Consumer Staples where the two key contributors, offset partially by a small negative impact from stock selection.

The Fund's relative performance in the second quarter can be attributed to the following:

- The Fund benefitted from its overweight position to the Information Technology sector as it outperformed the broader index (+23.2% vs +11.7%). This
 was supported by strong stock selection within the sector as Fund holdings including Amphenol (+50.8% in USD) delivered robust returns above the
 broader MSCI World Information Technology sector.
- From an asset allocation perspective, the Fund's overweight position to Healthcare acted as a drag as the sector underperformed the broader Index (-4.0% vs +11.7%). Further, concerns around tariff policies in the sector contributed to weaker performance for Fund holding Thermo Fisher (-18.4%) resulting in a slight headwind from negative stock section.
- The Fund saw a tailwind from a zero-weight allocation to some of the benchmark's worst performing sectors, including Energy (-3.7%), Utilities (-2.7%) and Consumer Staples (+3.6%), as investors seemingly rotated away from more defensive stocks in an increasingly risk-on environment.

Activity

No changes were made to the portfolio.

Outlook

The Fund seeks to invest in quality growth companies trading at reasonable valuations. By doing so, we seek to invest in companies that are experiencing faster profit growth, larger margins and with less susceptibility to cyclical pressures. In particular, our focus on quality growth-at-a-reasonable-price has shown it strength in avoiding the highly valued non-profitable tech businesses that have swung between large rises and falls but ultimately underperformed significantly over the post-pandemic period.

The table below illustrates how the portfolio reflects the four key tenets of our approach of growth, quality, valuation, and conviction.

- Growth drives long-term returns. We focus on companies with exposure to long-term secular growth themes, that are expected to grow faster than the market over time, and which may offer more predictable, sustainable growth.
- Quality protects against downside risks. We focus on high and consistent return on capital, balance sheet strength, and sustainable competitive advantages. Valuation is important; we aim to avoid overpaying for (uncertain) future growth.
- Valuation is important we will not overpay for future growth.
- Conviction is reflected in our high active share, 30-stock, equal-target-weight portfolio, long-term, low-turnover approach.

For the financial period ended 30 June 2025

Guinness Global Innovators Fund (the "Fund") (continued)

Outlook (continued)

The Fund has many superior characteristics to the broad market; higher sales and earnings growth, superior return on capital, and greater balance sheet strength, with higher historic growth. The Fund currently trades at a 20.0% premium to the MSCI World Index on a P/E (2025e) basis, with expected earnings growth (2026 vs 2025) of 21.5% vs the MSCI World of 14.9%. Compared to the MSCI World Growth index, the Fund trades at a 16.7% discount (P/E 2025e), but with a comparable level of expected earnings per share growth.

Source: Guinness Global Investors, Bloomberg, as of 30 June 2025

While short-term share price moves can reflect temporary disruptions, long-term value creation remains our priority. Even through a quarter of heightened volatility, stock fundamentals have shown resiliency, giving us reassurance in our bottom-up approach to stock-picking in the face of continued macroeconomic uncertainty. We are confident that the Fund's focus on high quality growth stocks, underpinned by structural innovation themes, stands us in good stead going forward. Our research process helps to identify these quality growth companies, whilst also maintaining a valuation discipline – which is particularly important in the context of a market where valuation is front of mind. In addition, our equally weighted positions limit over-reliance on any single company. We continue to focus on these key tenets in the Fund and remain confident of this process over the long term.

For the financial period ended 30 June 2025

Guinness Greater China Fund (the "Fund")

Performance summary in US Dollars: Class Y compared with MSCI Golden Dragon Net Return Index

			Annualis	ed		Cal	endar years		
	6 months	1 year	3 years	5 years	2020	2021	2022	2023	2024
Fund	11.3%	23.3%	-2.8%	0.6%	17.9%	0.1%	-23.0%	-9.9%	4.5%
Index	14.9%	26.1%	8.1%	4.6%	28.2%	-9.5%	-22.3%	-0.9%	22.5%

Review

Year-to-date, the Fund (Y class, USD) has risen by 11.3%, while the benchmark, the MSCI Golden Dragon Index has risen by 14.9%, and the MSCI China Index has risen by 17.3%. Therefore year-to-date the Fund has underperformed the MSCI Golden Dragon Index by 3.6% and underperformed the MSCI China Index by 6.1%

Year-to-date, relative to the MSCI China Index, areas which helped the Fund's performance were:

- Stock selection in the Information Technology sector, driven by Elite Material, Shenzhen H&T Intelligent and TSMC.
- Stock selection in the Health Care sector, driven by Sino Biopharmaceutical.
- Stock selection in the Industrials sector, driven by Shenzhen Inovance Technology and Sany Heavy Industry.

Year-to-date, areas which detracted from the Fund's relative performance were:

- The Fund's lower exposure to AI related names and large cap stocks in Hong Kong in the first quarter. Alibaba was the strongest stock in the first quarter and is the second largest stock in the MSCI China Index, accounting for 9.7% the index. In the first quarter it rose 56% due to its exposure to AI in China. The Fund is run on an equally weighted basis and so each position has a neutral weight of 3.3%. As Alibaba outperformed in the first quarter, the Fund benefited from less of its outperformance than the index.
- Ultimately, the Fund's underweight to the following large cap stocks explains most of its underperformance versus the index: Alibaba and Tencent (both held), and Xiaomi, BYD and Pinduoduo (none held at the time). In the second quarter, we reduced the Fund's underweight to large cap offshore stocks by buying BYD and Meituan (discussed later in the review).

Activity

Sells

We sold Xinyi Solar, which is the world's largest manufacturer of solar glass. Given the oversupply in the solar industry, Xinyi's leading position has not allowed it to escape the pricing pressure seen across all parts of the supply chain. A combination of falling solar glass prices and idle capacity meant the company's gross margins fell significantly last year. Impairments on some equipment and inventory put further pressure on net profits. Though we do believe the company is doing better than most of its competition, we do not see the oversupply in the industry ending soon.

CSPC Pharmaceutical has for some years been transitioning away from its generics portfolio towards its new innovative set of products. Due to government policy, CSPC's generics drugs have faced significant pricing pressure. Our expectation was the company's new innovative drugs, which face much lower pricing pressure, would offset the weakness from the generics segment. But this has not been the case and management admitted it would take another year or two for the new drugs to come through. We have given the business some time to show it could deliver but after the fourth quarter results, we came to the conclusion that the business is likely to face a constant drag from the generics business.

Chongqing Fuling Zhacai is a condiment manufacturer which is well known for its zhacai pickled condiments. The business certainly has pricing power but has found it difficult to grow volume outside of its core regions. Fuling Zhacai has tried to find new growth drivers through other condiments such as paocai but this has not delivered, so now the company is turning to acquisitions to drive growth. Overall, the business has failed to deliver the structural growth we aim for in a subdued macro environment.

Buys

We bought Hongfa Technology, which is the world's largest electric relay manufacturer. A relay is a switch that allows a low-voltage signal to control a higher voltage circuit and is a critical component used across many applications. Hongfa's relays are used in various downstream markets, the most important of which are the automobile, home appliances and power industries. We argue the company has several structural growth opportunities to take advantage of:

- Cars, whether internal combustion engine ("ICE") or electric vehicles ("EVs"), are becoming smarter and more functions are continuously being added. These functions require more relays, which increases the total addressable market for Hongfa.
- Rising market share for EVs implies greater demand for high voltage direct current ("HVDC") relays, which are used to enable fast charging for EVs.
 Hongfa is a major supplier to BYD and so should benefit from BYD's rising popularity.
- In China, it is likely we will see a boom in data centre construction to facilitate AI development, which will place greater demand on the power grid. This
 may increase the State Grid's capex plans, which is likely to lead to greater demand for Hongfa's power relays.

Meituan operates China's largest food delivery platform and also has other services including:

- Bookings for in-store dining, hotel and travel.
- Instashopping, which is on-demand delivery in tier one cities, covering both food and non-food items.
- Meituan Select, which is a community group buying business focused on supermarket goods in lower tier cities.

In response to Meituan's progress in on-demand delivery, JD.com (held in the Fund) has entered the food delivery industry. JD.com has provided significant subsidies to both customers and drivers, allowing it to rapidly gain market share. This has forced Meituan to respond by also subsidising prices, leading to likely lower margins in coming quarters and a reduction in its valuation multiple.

We think Meituan has strong competitive advantages which should allow it to handle JD's entry into the market. One of Meituan's strongest advantages is the network it has built up - it has the most merchants, customers and drivers in China. For many customers, Meituan is the app they naturally think of when it comes to food delivery. The more merchants Meituan signs up to its app, the more entrenched its position becomes. As a result of having the most drivers, it also has lower wait times which further increases its attraction to both customers and merchants. Another competitive advantage of Meituan is its technological infrastructure – this allows it to deliver orders quicker than its competitors. There is also likely a limit to how much JD.com may spend on subsidies.

Though there are new competitive threats to Meituan, for the lower valuation now on offer, we believe the risk reward ratio is more favourable than existing holdings in the Fund.

Ranked by sales volume, BYD is the world's largest EV company. In China, so far this year it has 27% market share (measured by volume) in the EV market. For context, the next largest company is Tesla with 5% market share. Though China's EV market is the world's largest, competition remains intense and so the export market is a key source of future growth. Here BYD is doing well - in the first four months of this year, exports accounted for more than 20% of BYD's total sales volume, versus 12% last year. The largest EV markets in the world outside of China are the US, Germany, UK and France. BYD does not sell its cars in the US so is not directly exposed to US tariffs – an attractive trait from our perspective. In the first five months of this year, BYD's sales volume in the UK was 14.8k units, up 571% year-on-year.

For the financial period ended 30 June 2025

Guinness Greater China Fund (the "Fund") (continued)

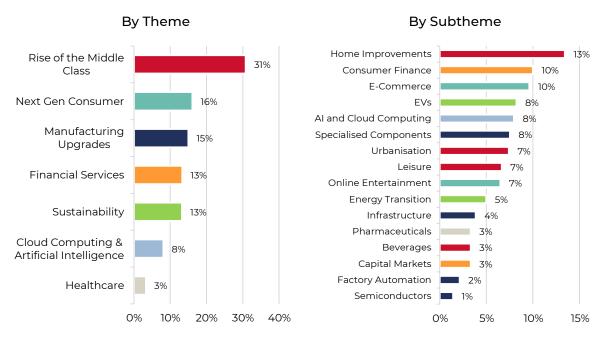

Activity (continued)

BYD's management say their competitive advantages include technological leadership, cost advantages and efficient decision making. On technology, at the same price point BYD cars generally have longer range than most of their competition. BYD has cost advantages due to its lower battery costs which are made in house, a more advanced EV platform and architecture, a far more competitive local supply chain and economies of scale. This means BYD's margins are higher than their competitors, allowing them to cut prices and maintain profitability.

While we do think the competition is likely to gradually catch up, we think it may take several years for Western and Asian competitors to do so. Despite its strong share price performance, BYD's earnings estimates have also increased and so for the growth on offer, valuations are compelling from a risk-reward perspective.

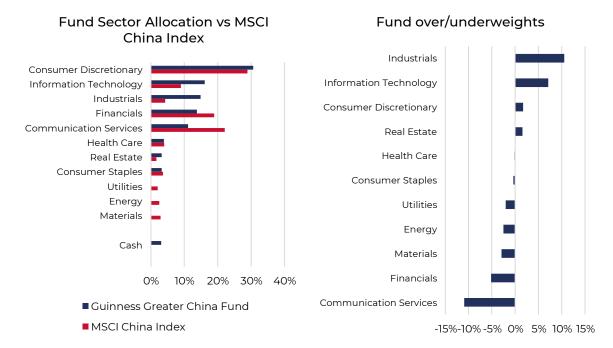

Portfolio Positionina

By theme, the Fund's largest exposures are to the Rise of the Middle Class, followed by Next Gen Consumer and Manufacturing Upgrades. Important subthemes include Home Improvements, Consumer Finance and E-Commerce.

(Data as of 30 June 2025, source: Guinness Global Investors calculations. Data assumes portfolio is equally weighted)

On a sector basis, the Fund's largest exposures are to the Consumer Discretionary, Information Technology and Industrials sectors. Relative to the MSCI China Index, the Fund is overweight in the Industrials and Information Technology sectors. The Fund is underweight in the Communication Services sector.

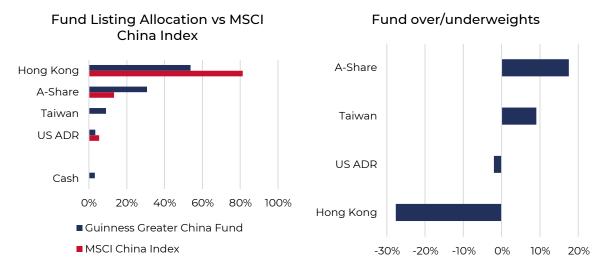

(Data as of 30 June 2025, source: Guinness Global Investors calculations, Bloomberg)

On a listing basis, the Fund has 54% exposure to stocks listed in Hong Kong, 31% exposure to the A share market and a small 9% allocation to Taiwan. Relative to the MSCI China Index, this makes the Fund 18% overweight to the A share market and 28% underweight to stocks listed in Hong Kong.

For the financial period ended 30 June 2025

Guinness Greater China Fund (the "Fund") (continued)

Portfolio Positioning (continued)

(Data as of 30 June 2025, source: Guinness Global Investors calculations, Bloomberg)

Outlook

With more investors looking to diversify away from the US, we argue China is an inevitable market to consider. Outside of the US, China has the largest number of quality and growing companies. Chinese markets can also provide investors with diversification opportunities within their portfolios due to their lower correlation with American markets. The Fund provides investors with exposure to quality, growing companies within China. This set of companies continues to be valued by the market at a very attractive valuation due to the sluggish macro environment in China. We expect by the end of 2026/early 2027, for China's new pillar industries to drive the economy forward, which may lead to a positive earnings revisions cycle for China and a valuation re-rating.

Despite China's substantial contribution to the global pool of quality and growth companies, the Fund's holdings continue to trade at attractive valuations. The Fund is currently trading on a forward year price earnings ratio of ~12x, below its long-term average of ~14x. The market remains concerned over the sluggish macroenvironment which we argue is driven by China's ongoing transition away from property and towards the new pillar industries. For the past few years, the drag from property has been greater than the contribution from the new pillar industries, meaning that in aggregate, earnings revisions have been continuously revised downwards in China. Absent any large tariff shocks we expect by the end of 2026/early 2027, the new pillar industries are to become large enough to offset the drag from the contraction in property. This should lead to earnings revisions eventually bottoming and then rising for China as a whole, which may lead both domestic and foreign investors to look at the market more seriously. Often equity markets move well before fundamentals shift, so we argue now is a good time to be looking to allocate to China, in anticipation of a valuation re-rating and new drivers behind the economy.

Guinness Emerging Markets Equity Income Fund (the "Fund")

Performance summary in US Dollars: Class Y compared with MSCI Emerging Markets Net Return Index

	•		Annua		Calendar years				
	6 months	1 year	3 years	5 years	2020	2021	2022	2023	2024
Fund	17.2%	22.0%	13.4%	10.5%	6.7%	3.1%	-12.6%	12.9%	10.9%
Index	15.3%	15.3%	9.7%	6.8%	18.3%	-2.5%	-20.1%	9.8%	7.5%

Review

In the first half of 2025 the Fund rose 17.2%, outperforming the benchmark which was up 15.3%.

The Fund declared a distribution of GBP 0.2992 (Class Y) shortly following the end of the first half. From 2017 to 2024, the annual distribution has grown at a 6.8% compound annual growth rate, in sterling terms.

Emerging markets outperformed developed markets, with the MSCI World Index up 9.5% and the S&P 500 in the US rising 6.2%. Within emerging markets, Latin America was the best performer, up 29.9% with the strength driven by Brazil and Mexico, both benefiting from currency strength against the dollar. EMEA (Europe, Middle East and Africa) was next, rising 16.2%. Asia was the worst performer, rising 13.9%, driven by the uncertainty over trade, a decline in sentiment towards the Indian market, and some weakness in China's domestic economy.

The strong rebound in Latin America was one of the key contributors to performance. All of the top three performers in the Fund were Brazilian. Technology holdings were also among the better performers, but the performance across stocks in the sector was mixed. The best performing Asian stock in the portfolio was a Taiwanese holding with good exposure to the Al supply chain.

Weaker performers included those with exposure to trade, which was unsurprising given the threat of higher tariffs from the US Trump administration. Indian stocks were generally poorer performers, with one of our Indian IT services holdings being the second worst performer in the portfolio.

The Fund currently has an overweight position in Latin America and an underweight position in EMEA. The Fund has a smaller underweight to Asia and an overweight to holdings in companies listed in developed markets but that derive more than half of their revenues from emerging markets.

Within the portfolio, the best performing stock was Porto Seguro. The company benefited from underlying strength in the Brazilian market, supported by a strong rebound in the currency. Porto Seguro has continued to trade well, reporting first quarter earnings that were meaningfully ahead of expectations, with the Health and Banking segments were both drivers of the overall result. Earnings in the main insurance segment came under pressure due to a seasonal up-tick in auto insurance claims. However, written premiums in Auto increased 4.5% year-on-year, despite a reduction in the insured fleet.

The weakest performer was Haier Smart Home. Haier Smart Home is one China's largest household appliances manufacturers. Sales to the US account for ~30% of its total revenue and were impacted by the US imposing rising tariffs on China in April. Of sales to the US, more than half are produced locally, with another 30% from Mexico and 15% from China. To address the US market, Haier is to expand in Mexico and South East Asia. Expanding its production facilities in the US has the drawback of being very expensive, as capex costs 6x as much compared to Asia (though this excludes the effect of higher tariffs).

Activity

In the first six months of the year, we made one change in the portfolio, selling Broadcom. Broadcom has been a position held since inception of the Fund and has made a very positive contribution to performance over that time. The company's management has demonstrated skilful acquisition abilities as it has worked to diversify revenue streams from different IT subsectors. This ability has come to be well-recognized by the market, and we have sold the position on valuation grounds. We seek to redeploy the proceeds in an alternative stock that offers better upside potential.

Portfolio Positioning

The Fund's allocations versus the benchmark are shown below:

The biggest overweight positions are in the Consumer Staples and Consumer Discretionary sectors, and Health Care. There are no holdings in the Materials, Energy, Utilities or Real Estate sectors, and the Fund is also underweight Communication Services and Industrials.

On a country basis, excluding positions listed in developed markets, the Fund is most overweight China, Brazil, Mexico and Taiwan. The largest underweights are to South Korea, India, Saudi Arabia and South Africa (we have three positions in India, and none in the other three countries).

For the financial period ended 30 June 2025

Guinness Emerging Markets Equity Income Fund (the "Fund") (continued)

Outlook

While the first half of the year saw a renewed focus on trade and tariffs with the US Liberation Day announcements, attention gradual drifted away from the topic towards the end of the period, as geopolitical tensions in the Middle East came to the fore in June. Nevertheless, in terms of likely impact on the prospects for emerging markets, we believe the US-China relationship is critical. While the market is currently sanguine on the broader tariff landscape we believe there is a potential for volatility to increase again, given the proximity of some of the deadlines that have been imposed and the complexity of many of the issues at stake. The framework agreement with China indicates progress, but it is not the end of the matter.

We have had time to see how tariffs and trade conflicts are playing out. Our overall reading of the situation has not changed significantly: we saw the aggressive opening position as a tactic to bring parties to the negotiating table. Some progress in talks has been achieved (or at least announced) but it is unclear is how long remaining negotiations will take, and of course they may not run to the schedule of the US. Further, it is less clear whether any of the deals that result will ultimately have the potential to reshape trade patterns and supply chains.

At the centre of the trade dispute is a recognition of the progress that China has and is marking in high end manufacturing. The fruits of China's sustained investments in strategically-valuable sectors have started to become apparent, as China announced earlier this year new innovations and breakthroughs in areas such as AI and electric vehicle technology. This gets to the heart of possibly why China's response this time around has been resilient: China has made genuine technological progress and so has more economic strength and less dependence on the West. China has more options in terms of the different export markets it can serve. And supply chains have diversified since the first trade war and since Covid, permitting companies much greater flexibility.

Nevertheless, China's economy clearly has the potential to be harmed by a trade dispute, particularly if it should escalate to the level seen in early April where effectively there is an embargo on trade with the US. However, China does not face the same constraints that the US does: the US faces the risk of inflation flaring up again, particularly if interest rates are to come down again, and the fiscal situation is arguably chronically challenged – and likely more so with the recent spending bill. So the US ultimately has less room to manoeuvre.

Our Latin American exposure in the portfolio has provided relative resilience in this recent period. While Mexico has previously been targeted by Trump, our exposure in the country is to coke bottlers that operate across Latin America, so providing geographic diversification, and due to the nature of the product, relatively unimpacted by cross-border trade concerns. Brazil too, has come through this period relatively well so far, although recent announcements indicate this position could be vulnerable

Despite the increased uncertainty, our focus remains the same – on companies that have consistently earned high returns on capital. Companies with such a track record have shown the ability to navigate periods of uncertainty in the past and we think are likely to continue to do so.

Given the multiple uncertainties that we face at this juncture, and the ability for multiple different scenarios to unfold, we believe that a focus on individual companies and their ability to sustain strong operating and financial results is now more important than ever.

The emphasis we place on the underlying quality of a business, earning high returns on capital and generating cash, provides the underpinning for rewarding shareholders with dividends while seeking to compound their earnings over the long term. It is this combination, embedded in an equally-weighted portfolio, that we believe works particularly well in an emerging market context, and provides investors with access to a disciplined strategy with which they can navigate an uncertain environment.

Guinness Best of Asia Fund (the "Fund")

Performance summary in US Dollars: Class Y compared with MSCI AC Asia Pacific ex Japan Net Return Index

			Annualised		Calendar years				
	6 months	1 year	3 years	5 years	2020	2021	2022	2023	2024
Fund	9.3%	18.6%	6.3%	8.1%	28.8%	2.8%	-23.7%	6.6%	13.3%
Index	14.1%	15.8%	9.7%	7.1%	22.4%	-2.9%	-17.5%	7.4%	10.2%

Review

The Fund rose 9.3% during the quarter compared to its benchmark, the MSCI AC Asia Pacific ex Japan Net Total Return Index, which rose 14.1%.

There has been no shortage of market volatility in the first half of 2025, with a combination of unpredictable policy signals and unstable geopolitics that have kept markets on edge. US political decision-making this year has created widespread uncertainty.

From a trade perspective, we have seen US tariff escalations as an attempt to force trade renegotiations with trading partners. Sharp market reactions led to a 90 day pause on these new tariffs until 9th July, with claims from the Administration that they would reach "90 deals in 90 days". These claims of have proven to be untrue, with Scott Bessent, the US Trade Secretary, recently noting that they expected 12 trade deals to be completed during the initial pause, and now the implementation date of these new tariffs has been delayed for a further month until 1st August. China was the sole country who was not party to the tariff pause. Instead, high tariffs announced for China resulted in a retaliatory tariff war. At the peak, the US imposed 145% tariffs on Chinese goods whilst China imposed 125% tariffs on American goods. De-escalation efforts in May resulted in the US lowering tariffs down to 30% and China lowering theirs to 10%, followed by further agreements related to non-tariff measures in June, including China lifting restrictions on certain rare earth exports.

On foreign policy, the US is increasingly engaging with and aligning with parties involved in the continued unrest in the Middle East. On the domestic front, we have seen the passing of Trump's Big Beautiful Bill, creating a permanent extension of Trump's 2017 tax cuts, reducing Medicaid spend and phasing out renewable energy tax credits, whilst increasing spend related to immigration enforcement and defence. According to estimates released by the Congressional Budget Office, the passing of the Big Beautiful Bill is expected to increase the fiscal deficit by \$2.4tn over the next ten years (made up of a \$3.7tn revenue reduction, partially offset by a \$1.3tn reduction in outlays).

As a result, the longstanding dominance of US-driven market performance is increasingly being challenged by a more regionally distributed investment dynamic. Some of the reasons for this includes investors seeking to diversify income streams away from a weakening USD, and viewing other regions as more attractive on a valuation basis. This has led to outperformance in Europe and Asia versus the US on a year-to-date basis.

Within Asia, performance in the first half of 2025 was driven by Korea, where the political environment has finally stabilised after months of political uncertainty following an attempt at imposing martial law by impeached president Yoon Suk Yeol. Hong Kong, Singapore and China also contributed to outperformance. In China, there was a tech-driven rally at the beginning of the year, led by the initial Deepseek surprise in January, and followed by growing interest, not just in Chinese Al, but in broader Chinese technological innovations. This rally saw a sharp end at the start of the US-China tariff war but has mostly recovered as trade relationships improved and tariffs were lowered.

In Thailand, slowing consumption, weaker tourism, and concerns of US tariff impact have led to weak market performance. Household debt is now around 90% of GDP, limiting domestic consumers' ability to spend. Foreign investment continues to exit despite the government's attempts to stabilise the market through the launch of the Vayupak Fund in August 2024, which has the ability to allocate across different asset classes. At inception, over half of the Fund's resources was allocated to SET50 Index stocks (the top 50 companies listed on the Stock Exchange of Thailand) but the market has continued to fall, giving investors cause for concern. Additionally, at the end of June a leaked phone call between the Thai Prime Minister Paetongtarn Shinawatra and Cambodian Senate President Hun Sen sparked public outrage, leading to accusations of compromising national interests, and the eventual suspension of Paetongtarn from office.

Activity

In the quarter we sold Hanon Systems and bought Proya Cosmetics.

Hanon Systems has seen a long, slow decline in both environment and quality, and so was removed this quarter.

Proya Cosmetics is one of China's most prominent cosmetics brands, mainly targeting the mass market. Its primary focus is on skincare which tends to have a relatively stickier customer base and longer product lifecycle. To capture the premiumisation trend, the company has expanded its brand portfolio so that as the early cohort of lower-income customers becomes wealthier, higher end goods can be sold. As the company's growth rate has moderated following a period of very high growth, the stock's valuation multiple is very compelling for the growth on offer.

Portfolio Positioning

Chinese companies continue to account for the majority of the Fund, and at 56% allocation, is overweight the benchmark by 28%. The majority of these companies fit into two of our eight structural growth themes: the rise of the middle class, and next generation consumer trends. Elsewhere, we are underweight Korea by 11%, and Australia, India and Taiwan by 8% each.

On a sector basis our biggest exposure is to Technology, which accounts for 27% of the portfolio, followed by Consumer Discretionary, which accounts for 22% of the portfolio and where we hold our largest overweight to the benchmark. The main underweights are to Financials, where we are underweight by 14% versus the benchmark, and Materials where we are underweighting by 5%.

Outlook

Global politics and economics will likely continue to be complex and unpredictable through the second half of 2025. USD has remained weak relative to recent history, and investors are looking beyond the US for returns.

Both Asia and China are attractive diversification options for those looking to shift away from a heavy US-centric portfolio. Our benchmark index, the MSCI AC Asia Pacific ex Japan has a 0.65 correlation with the S&P 500, and unsurprisingly, the MSCI China A Onshore Index correlation with the S&P 500 comes in even lower, at 0.33.

From a valuation perspective, Asia, and particularly China, look like attractive regions, where we continue to see plenty of opportunities. As such, we believe investors looking for regional diversification at attractive valuations will almost certainly be considering Asian markets. However, we remind readers that not all value opportunities are the same. For us, this means whilst we continue with our value discipline, our focus remains on looking for cash-generative, quality businesses that are able to operate through tough periods of economic cycles.

Source: FE Analytics (data as at 30.06.2025)

Review

In the first 6 months of 2025, the Fund returned -1.6% (in USD) whilst the MSCI World Mid Cap Index returned +10.3%. The Fund therefore underperformed the MSCI World Midcap by 11.89%.

We saw all of the Fund underperformance occur in Q1 2025, which, having seen strong performance over January, ultimately saw a performance rotation as overweight exposures became out of favour – firstly from our overweight exposure to data centres build outs, which was hit hardest on the DeekSeek announcement, and secondly, ongoing concerns of the impact on the global economy by the Trump administration's trade policies which left investors seeking more defensive-orientated businesses. Q2 saw the Fund perform in-line with the benchmark and we are confident we can drive strong performance from here as economic uncertainties ease. A good example of this is those companies most impacted by the announcement of DeepSeek in Q1, have gone onto become our best performing stocks in Q2 as the underlying fundamentals had no changed post the DeepSeek announcement, and, in fact, saw increasing capital expenditure forecasts from their customers in the years to come.

It is important to reiterate 3 points: 1) we continue to seek high quality midcap businesses which have proven track records of high return on capital throughout varying market conditions, and of which do not rely on debt to fuel growth – two areas we believe are particularly important moving forward as we navigate an increasingly uncertain market; 2) the distinction between mid-caps and small caps – a high proportion of small caps are loss-making businesses with razor thin return metrics and with amplified exposure to weak balance sheets; 3) where we have seen sell offs in underlying holdings, the growth prospects have remained robust with valuation compression driving the weakness. This gives us confidence that these businesses remain well positioned moving forward.

Markets entered 2025 on uncertain footing. Strong U.S. labour and manufacturing data initially trimmed expectations for rate cuts, but a benign inflation print in mid-January and solid earnings season offered a brief lift to equities. However, following Donald Trump's inauguration on January 20th, sentiment deteriorated. While markets initially welcomed policy clarity, momentum faded amid a flurry of unpredictable Executive Orders, tariff threats, and earnings volatility. Global equities began to diverge — with Europe outperforming the U.S. thanks to its value tilt and rising defence spending, while China rallied on AI enthusiasm following the launch of DeepSeek, a promising domestic large language model.

By mid-February, markets turned decisively risk-off. Fears of a U.S. slowdown intensified as economic data softened, and inflation remained sticky. Trump's suggestion that a recession was "not off the table" exacerbated anxiety, sending the MSCI World down nearly 8% from its peak. Growth stocks, particularly the Magnificent Seven, corrected sharply while defensives outperformed. A temporary rebound in late March was driven by Fed reassurance and optimism that tariffs might be scaled back, but this proved fleeting. Trump's announcement of new auto tariffs and threats toward EU allies reignited fears, and risk appetite faded once again into quarter-end.

The second quarter began with a sharp sell-off triggered by Trump's aggressive "Liberation Day" tariffs on April 2nd, which caused the MSCI World to fall 4.7%. Fears of a full-scale trade war intensified as countries announced retaliatory measures. While non-U.S. equities had been resilient year-to-date, they too succumbed to the drawdown. However, markets rebounded swiftly following a 90-day tariff pause for non-retaliating nations, leading to a 6.5% rally just one week later. This pattern of tariff threats followed by partial reversals gave rise to the so-called "TACO trade".

As Q2 progressed, equities continued to rally across styles and regions, shrugging off macro risks including tensions in the Middle East, mounting U.S. fiscal concerns following the "Big Beautiful Budget Bill," and political pressure on the Fed. From mid-May — coinciding with a U.S.-China trade truce — markets entered a phase of synchronised performance, suggesting investors were pricing in a more balanced global outlook. Inflation remained contained, trade disruptions appeared manageable, and earnings stayed robust. While uncertainty around looming trade deal deadlines in July kept optimism in check, equities held up well.

For the financial period ended 30 June 2025

Guinness Global Quality Mid Cap Fund (the "Fund") (continued)

Review (continued)

Over the first half of the year, the Fund's underperformance versus the MSCI World Index can be attributed to the following:

- As mentioned above, all the Fund's underperformance came in the first quarter of 2025. Here, the Fund's overweight exposure to electrical infrastructure
 structural theme was a major drag on performance after the DeepSeek announcement in late January left investors reassessing their Al exposures. This
 was predominantly felt through our capital goods exposure (including holdings Vertiv and Hubbell) but also through some IT hardware and equipment
 names (including Arista and Delta Electronics).
 - Despite the market volatility around the announcement, we have continued to see the market upgrade capex expectations for the largest data centers providers and have subsequently seen these name become our best performing stocks in Q2. On a net basis, these stocks remain a net drag over the 6-month period but have positive momentum going into Q3.
- More broadly the market saw a material rotation in the 2nd quarter's winners versus those that led the market in the 1st quarter the more growthorientated areas of the market drove the market in Q2, having been the laggards in Q1. On a net basis, value remained ahead of growth over the 6
 month period and was subsequently a relative drag on the Fund.
- Our exposure to the semiconductor industry was also a drag on Fund performance. This included Fund holding Enphase, which faced proposed legislation
 in the 'Big Beautiful Bill' that aimed to phase out solar tax credits earlier than anticipated. We subsequently sold this position during the quarter.
- Positively, our underweight position to some of the weakest sectors over 1H25 Consumer Discretionary, Energy, Materials, Energy, Real Estate were
 positive attributors to Fund performance.
- Finally, our relatively low exposure to areas most impacted by President Trump's tariffs have been positive. Whilst our businesses are not immune, and
 mid cap companies feel investor sentiment shift more quickly, we do not have exposure to those areas most impacted such as automotive and apparel
 stocks

Activity

We made 3 changes to the Fund's holdings during the 1st quarter of 2025. We bought positions in Hubbell, Inficon and Vertiv, and sold positions in AO Smith, Jack Henry, and Skyworks Solutions.

We made 3 changes to the Fund's holdings during the 2nd quarter of 2025. We bought positions in MSCI, Anta Sports and Roper Technologies, and sold positions in Enphase Energy, Tetra Tech, and Interroll Holdings.

Portfolio Positionina

Looking at the Fund's exposure based on Global Industry Classification Standard ("GICS") sectors versus the MSCI World Mid Cap Index, the Fund continues to have no exposure to highly regulated and commoditised areas of Real Estate, Energy, Materials, and Utilities. We continue to hold the majority of Fund holdings within the IT (42%), Industrial (26%), Health Care (26%), Financial (4%) and Consumer Discretionary (3%) sectors. This is not a conscience view of the select sectors' outlooks but rather a bottom-up consequence of our focus on quality and mid-cap growth businesses.

On a regional basis, North America continues to be the Fund's largest exposure (64%), followed by Europe (30%) and Asia Pacific (7%). The Fund has an in-line exposure to North America, whilst having a relative underweight to Asia-Pacific, which is offset by its overweight exposure to Europe.

Outlook

Despite market volatility in 2025, the Fund's focus on quality growth remained well-positioned relative to speculative growth, which has consistently underperformed since the Fund's launch in late 2020. Looking ahead, we expect this trend to persist.

- Quality Remains Key: We believe interest rates are unlikely to return to ultra-low levels, and global economic growth is expected to remain challenging.
 As such, businesses with strong balance sheets—those not reliant on excessive debt for growth—and companies benefiting from structural growth drivers are likely to be best positioned.
- Mid-Cap Opportunity: The Fund's mid-cap focus has faced challenges in recent years as markets have been dominated by a small number of large-cap
 names, resulting in heightened market concentration. Despite this, the Fund has performed well, particularly given that many peers and broader market
 participants focus on large-cap stocks, often holding the same names. We believe this presents a compelling opportunity for investors to diversify into
 the often-overlooked mid-cap space—where companies combine the resilience of established businesses with the dynamism of growth-oriented firms.

For the financial period ended 30 June 2025

Guinness Pan-European Equity Income Fund (the "Fund")

Performance summary in US Dollars: Class Y compared with MSCI Europe Index to end June 2025

	3 months	Since inception
Fund	13.3%	12.4%
Index	11.4%	11.9%
Source: EE data		

The Fund was launched on 19 February 2025 and therefore the performance record is relatively short. As a result, the interim report covers the period from launch of the Fund.

Since inception the Fund rose +12.4%, versus the MSCI Europe Index return of +11.9% (in USD). The Fund therefore outperformed by 0.5%. It should be noted that all the positive performance of the index came from the weakness of USD vs the EUR.

Review

Over the period, European markets continued to benefit from relatively lower levels of inflation vs the US; enabling the ECB to continue on its rate cutting path. Since the peak in June 2024 the ECB has now reduced its deposit facility eight consecutive times to a rate of 2.0% as of 5th June, and looks likely to remain on hold for the foreseeable future. If required, the ECB has room to make further interest rate cuts towards the 1.5% level as it sees headline inflation slowing to its 2% goal in mid-2025 and to 1.6% in 2026, and sees core inflation settling at 1.9% in 2026 and 2027 vs 2.4% today. All helped by three main disinflationary factors resulting from Trump's policies: namely falling energy input costs, the possible diversion of cheaply priced Chinese goods to Europe, and a stronger Euro reducing the cost of imports and acting as a break on activity by increasing the cost of exports. Looking further out the combination of renewed fiscal stimulus (from Germany) and stubbornly high levels of wage inflation within services, in turn driven by all time low unemployment of 6.2% in April, weak demographic trends and the structural shortage of labour, could limit ECB flexibility at the lower bound. On the other hand this also suggests higher real incomes and, in conjunction with high savings rates (of 15.2% vs 4.3% in the US), robust household spending.

Germany's fiscal headroom stands in stark contrast to the US. As our CIO Edmund Hariss and the Asia team comment, the US is currently debating its One Big Beautiful Bill Act which looks set to increase the deficit by \$4 trillion over the next 10 years through the renewal of Trump's first term tax cuts. Simultaneously the US government's refinancing requirement for the coming year is just over \$9 trillion and the incremental borrowing requirement is around \$2 trillion. The annual lifting of the debt ceiling without spending discipline no longer appears tenable, and the bond market constrains every move of the administration. By contrast Germany benefits from a relatively accommodative fiscal position. With German debt % GDP rising from the current ~62% of GDP to approximately 70% of GDP through 2030 according to JPM estimates, under new borrowing rules negotiated by incoming Chancellor Friedrich Merz (which have enabled €1tm of stimulus for Defence and Infrastructure spending over the next ten years). Levels that are still far below US government debt % GDP even as of today.

The risk of tariffs of up to 50% on the EU as of 9th July vs the current 10% level remains, now appear to have shifted to up to 30% from August, but negotiations are ongoing, and a pragmatic European Commission may reach a preliminary agreement with the US ahead of that date. The EC continues to view US demands as vague and excessive considering Europe's overall small trade surplus with the US once services are included (just €48bn or ~3% of total EU US trade of €1.6trn in 2023). Something that could easily be ironed out with additional purchases of US natural gas and agricultural products. However Trump's ire also focuses on so called non-tariff barriers such as VAT, the EU's digital services tax (3% levy) and overall regulatory zeal on US product exports.

In the face of US tariffs and the related risk of Chinese overcapacities flooding Europe and other non-US destinations, we would expect the EU to continue to display an improved esprit de corps along with moves to drive greater internal demand through industrially focused fiscal policy, like Germany's €1trn stimulus, and other regulatory and financial measures such as the Savings and Investments Union. The opportunity is significant; the IMF estimates that Europe's internal barriers are equivalent to tariffs of 45% on manufacturing and 110% for services, and trade across EU countries is less than half the level of trade across US states. Private households hold approximately one third of their financial assets in cash. Mobilising just 5% of that for investments would free up some €1.8tm or ~11% of GDP.

Fund sector attribution analysis

Over the reporting period, sector performance was driven by a combination of continued falls in interest rates, a resurgent Euro and fiscal stimulus from Germany focused on Defence and Infrastructure. In this environment leveraged and domestically focused sectors (including Real Estate, Utilities, Defence within Industrials and Communication Services) led the way. Technology however was also strong helped by improving China US trade negotiations. Energy underperformed due to ongoing adequate global supply of oil. Healthcare and Consumer Discretionary were weak given the uncertainty of US tariffs.

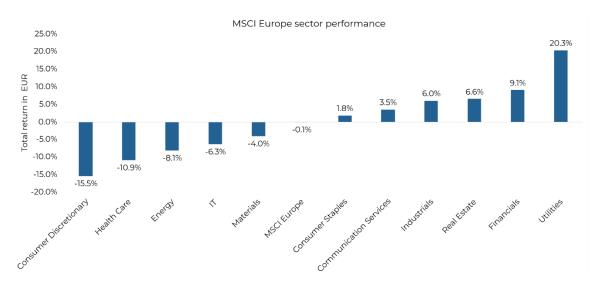

Figure 1: Sector performance breakdown of MSCI Europe - 19 February to 30 June 2025 (in EUR) Guinness Global Investors, Bloomberg (data as at 30 June 2025).

For the financial period ended 30 June 2025

Guinness Pan-European Equity Income Fund (the "Fund") (continued)

Review (continued)

Fund sector attribution analysis (continued)

At the Fund level Technology, Financials and Industrials led performance; led by semiconductor holdings Melexis and BE Semiconductor amid continued strong numbers from US peers, improving China US trade negotiations and potential for European manufacturers to benefit in the event of restrictions on the sale of advanced US equipment China. In Financials our long-standing insurance holding Mapfre continued its strong run helped by a sharply improved backdrop in LATAM. In addition, Admiral, the UK insurer delivered strong numbers on the back of better motor insurance pricing in the UK. While in Industrials new fund holding SPIE did well amid an improving outlook for electrical infrastructure spending notably in Germany, and Legrand traded well amid continued strong global capex for data centres. At the other end of the spectrum Salmar and Healthcare names were the weakest performers amid the threat of US import tariffs.

Stock attribution

The best five performing stocks (in EUR) over the period were, BE Semiconductor (purchased 15th April) +36.4%, Mapfre +35%, Euronext +23.4% SPIE (purchased 15th April) +23.4% and Helvetia +20.9%.

The worst five performing stocks over the period were Novo Nordisk -24.9%. Salmar -22.0%, EssilorLuxottica -19.1%, Atlas Copco -17.5%, DCC -12.2%.

Activity

In Q2, on 15 April the Fund made two portfolio changes. Buying BE Semiconductor (Netherlands) against the sale of TietoEvry (Finland) in the Information Technology sector, and acquiring Spie SA (France) against the sale of ABB (Switzerland) in the Industrials sector.

Fund sector exposure was therefore broadly unchanged while geographic exposure to France rose the overweight exposure to Finland fell. The changes resulted in an overall improvement to the quality and growth metrics for the Fund while valuation and dividend metrics remained broadly unchanged.

Portfolio Positioning

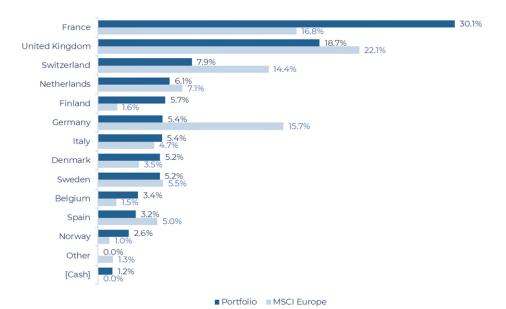

Figure 2: Geographic over/underweight % breakdown of the Fund versus MSCI Europe Index. Guinness Global Investors, Factset (data as at 30 June 2025).

The strategy continues to hold no exposure to highly cyclical areas such as mining and oil or regulated ones including utilities, telecoms and banks. Few companies from these sectors make it into our universe due to our focus on quality and persistent high cash returns. Industrials, Consumer Staples, and Financials (exchanges, insurers and wealth managers) remain our main sector overweight holdings. Leaving the Fund well balanced between quality defensives (-45%) and high-quality cyclicals. The Fund only has a small +1% overweight to the IT sector, but nearly all the companies held in the Fund are notable for their best-in-class use of technology, in particular our overweight Industrials sector is focused almost entirely on globally leading industrial technology and automation which looks well placed for the decade ahead.

Guinness Pan-European Equity Income Fund (the "Fund") (continued)

Portfolio Positioning (continued)

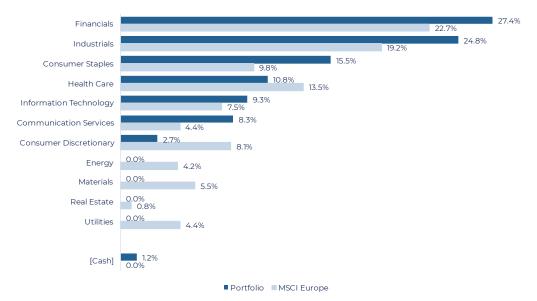

Figure 3: Sector over/underweight % breakdown of the Fund versus MSCI Europe Index. Guinness Global Investors, Factset (data as at 30 June 2025).

Outlook

At the end of H1 2025, the Fund was trading on 2026e PE ratio of 15.3x (vs MSCI Europe ex UK index at 14.5x), a slight premium to the index, but broadly inline with historic levels of valuation. By contrast valuations of US assets versus Europe and other regions remain close to all-time highs, as does the US share of MSCI World at >70% vs a 50-year average of close to 50%. While Europe's share of MSCI World lies around all-time lows of approximately just 17% vs a historic average of close to 30%. Heightened uncertainty around trade policy, foreign taxes and US financial health stand a good chance of at least partially redressing the balance. Particularly given the size of US markets relative to ex-US regions, small shifts can result into meaningful overseas flows.

We can offer little insight into Trump, Xi or Putin's next moves, but against such an uncertain and political backdrop we continue to view the portfolio as well placed. Focusing on resilient, scalable, cash generative companies with long histories of generating persistent high returns on capital alongside balance sheet strength and structural growth drivers. Most of the portfolio comprises either European domestic facing companies or globally focused businesses with predominantly local to local business models. Namely companies that are decentralised and close to their customers, producing for and serving them locally. With clearly identifiable barriers to entry, whether that be via scale, intellectual property, network effects, switching costs or regulation. The thirty stock equally weighted portfolio is well balanced between defensives (45%) and quality cyclicals (55%) and diversified across a broad spread of quality sectors, industries and end markets. Offering a concentrated exposure to high quality, cash generative companies, trading at attractive valuations with a sustainable dividend yield and good potential for dividend growth – whilst also offering shelter from uncertainties emerging from across the pond.

Guinness China RMB Income Fund (the "Fund")

				Since Inception (March
Fund Class	YTD	1 year	2 year	2023)
Class Y (CNY)	1.13%	2.28%	4.42%	4.83%

Review

The Fund's CNH Y class gained +1.13% in H1'25, the yield on the 2-year benchmark China Government bond rallied 10bps to 1.36%.

All bonds once again contributed to positive performance. China Government bonds maturing in 2028 and the holding in Export-Import Bank of China 4.15% 2027 outperformed.

The onshore and offshore renminbi gained +0.63% and +0.78%, respectively, against the dollar. Against the euro, the currencies were down 2.93% and 2.79%, respectively.

The A1 (weighted average rating factor ("WARF")) rated portfolio yields 1.46%, and has a duration of 1.04 years.

The first half of 2025 presented China's economy with a complex landscape, characterised by an intricate balancing act between escalating global trade tensions and persistent domestic structural challenges. Beijing responded with a series of proactive policy interventions, aiming to foster stability and cultivate high-quality, sustainable growth.

The year began with trade conflict rhetoric dominating market attention, impacting sentiment and activity. However, despite these pressures, China's manufacturing sector showed glimmers of recovery in the first quarter, with activity expanding at its fastest pace in a year. This growth, coupled with rising industrial production, was partly fuelled by strengthened domestic demand and foreign purchasers accelerating orders ahead of anticipated US tariff announcements.

Trade tensions intensified in the second quarter. While the manufacturing PMI dipped into contraction in April, Chinese exporters demonstrated agility by strategically front-loading shipments. This led to a surge in overall exports, with companies actively rerouting supply chains through Southeast Asian nations to circumvent impending tariffs. However, the re-escalation of tariffs in May led to a sharp decline in direct exports to the US by June. Despite this, China maintained a considerable trade surplus, highlighting its robust manufacturing capacity. A temporary 90-day US-China tariff de-escalation in June offered some short-term respite, contributing to a modest rebound in manufacturing sentiment.

Domestically, a key concern throughout the first half was persistent deflation. February's CPI contraction and a decline in core CPI underscored these pressures, reflecting weak domestic demand and existing overcapacity in certain sectors. The property market remained a significant drag on economic activity, marked by disappointing investment figures and stagnant home prices. Private investment also remained stagnant, suggesting subdued confidence among smaller businesses. Policymakers acknowledged these deep-seated issues, signalling a commitment to intensified efforts for sector stabilisation and a strategic pivot towards quality-focused development.

In response to these headwinds, the People's Bank of China ("PBOC") adopted a more accommodative monetary stance. It implemented a substantial monetary easing package in Q2, including interest rate and reserve requirement cuts, designed to inject liquidity and bolster confidence. The PBOC also signalled a preference for structural tools over broad-based easing, emphasising reducing social financing costs, optimising re-lending mechanisms for technological innovation, and exploring new policy tools for investment, consumption, and trade stabilisation.

Activity

Portfolio activity was centred around the bond maturities in Q2.

In April the USD China Cinda 4.25% 2025s issue matured, we used the proceeds to add the USD Abu Dhabi Government 1.625% bond maturing in 2028.

Then in May the China Government 3.39% 2025 bond matured, this was later replaced with a China Government Bond 1.75% maturing in 2027.

The China Government 2.55% bond matured in mid-June, and was rotated into the 2.28% 2027s issue.

Outlook

Despite increased confidence in China's recovery trajectory, the economy remains trapped in a disinflationary cycle. Overcoming these structural headwinds and lifting nominal GDP growth will likely necessitate coordinated fiscal expansion and further monetary easing from Beijing.

The success of the State Council's new real estate support measures in transforming the sector and stimulating broader economic activity will be a key factor to monitor. The persistence of trade tensions with the US also poses an ongoing headwind to both external and domestic indicators, and any escalation could further impede recovery efforts.

China's short-dated bond market remains attractive, supported by the PBoC's accommodative monetary stance designed to keep interest rates low and bolster growth. This dovish approach, coupled with strong domestic demand for safer assets amidst ongoing property sector challenges, should continue to underpin bond prices.

After gaining against the dollar in June, the renminbi should remain relatively supported. This resilience stems from China's concerted efforts to stabilise the economy, attract foreign investment, and internationalise the currency. However, the PBoC's looser monetary policy compared to the US, along with persistent geopolitical and trade dynamics, could still see some two-way volatility for the renminbi.

Guinness Asset Management Limited

Guinness China A Share Fund (the "Fund")

Performance summary in US Dollars: Class Y compared with MSCI China A Onshore

			Annua	lised			Ca	lendar years		
	6 months	1 year	3 years	5 years	2020	202	:1	2022	2023	2024
Fund	3.2%	15.9%	-	-		-	-	-	-	-2.7%
Index	3.5%	19.4%	-	-		-	-	-	-	11.6%

Poviou

Year-to-date, the Fund (Class Y USD) has risen by 3.2%, while the benchmark, the MSCI China A Onshore Index has risen by 3.5%. Therefore year-to-date the Fund has underperformed the benchmark by 0.3%.

Year-to-date, relative to the MSCI China A Onshore Index, areas which helped the Fund's performance were:

- Stock selection in the Industrials sector, driven by Jiangsu Hengli Hydraulic, Shandong Himile Mechanical, Shenzhen Inovance Technology and Sany Heavy Industry.
- Stock selection in the Information Technology sector, driven by Shengyi Technology and Shenzhen H&T Intelligent.
- Stock selection in the Communication Services sector, driven by G-bits Network Technology.

Year-to-date, areas which detracted from the Fund's relative performance were:

- The underweight to the Financials sector, where the state-owned banks, insurance companies and brokers were strong in a value led rally in the second quarter. The MSCI China A Onshore Value Index rose by 4.0% in the quarter. The Fund has no exposure to the state-owned banks which accounts for ~10% of the Index
- Stock selection in the Consumer Discretionary sector, driven by Suofeiya Home Collection and Haier Smart Home.
- Stock selection in the Health Care sector, driven by Shenzhen Mindray Bio-Medical and names not held such as Wuxi Apptech, Jiangsu Hengrui and CSPC Innovation.

Activity

Sells

Shenzhen Capchem Technology is a manufacturer of battery electrolytes. Given the oversupply in the domestic EV industry, battery material companies such as Capchem have seen selling prices fall significantly. The businesses' return on capital has consequently fallen to a level barely above the cost of capital. For a similar valuation, BYD represented a better alternative.

Zhejiang Jingsheng Mechanical is China's largest manufacturer of crystal growing furnaces, which are used to heat silicon to eventually make silicon wafers and then solar cells. The company also manufacturers semiconductor equipment. Given the oversupply in the solar industry, downstream customers have significantly cut back expansion plans and so Jingsheng's order book has weakened. The company's competitive advantage remains strong relative to its competition, but the prospects for earnings growth have dimmed.

Buys

Ranked by sales volume, BYD is the world's largest EV company. In China, so far this year it has 27% market share (measured by volume) in the EV market. For context, the next largest company is Tesla with 5% market share. Though China's EV market is the world's largest, competition remains intense and so the export market is a key source of future growth. Here BYD is doing well - in the first four months of this year, exports accounted for more than 20% of BYD's total sales volume, versus 12% last year. The largest EV markets in the world outside of China are the US, Germany, UK and France. BYD does not sell its cars in the US so is not directly exposed to US tariffs – an attractive trait from our perspective. In the first five months of this year, BYD's sales volume in the UK was 14.8k units, up 571% year-on-year.

BYD's management say their competitive advantages include technological leadership, cost advantages and efficient decision making. On technology, at the same price point BYD cars generally have longer range than most of their competition. BYD has cost advantages due to its lower battery costs which are made in house, a more advanced EV platform and architecture, a far more competitive local supply chain and economies of scale. This means BYD's margins are higher than their competitors, allowing them to cut prices and maintain profitability.

While we do think the competition is likely to gradually catch up, we think it may take several years for Western and Asian competitors to do so. Despite its strong share price performance, BYD's earnings estimates have also increased and so for the growth on offer, valuations are compelling from a risk-reward perspective.

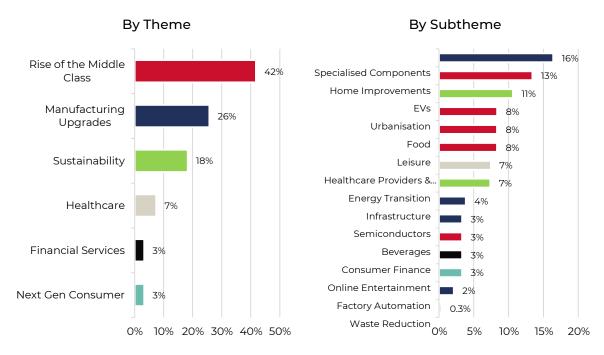

Proya Cosmetics is one of China's most prominent cosmetics brands, mainly targeting the mass market. Its primary focus is on skincare which tends to have a relatively stickier customer base and longer product lifecycle. To capture the premiumisation trend, the company has expanded its brand portfolio so that as the early cohort of lower-income customers becomes wealthier, higher end goods can be sold. As the company's growth rate has moderated following a period of very high growth, the stock's valuation multiple is very compelling for the growth on offer.

For the financial period ended 30 June 2025

Guinness China A Share Fund (the "Fund") (continued)

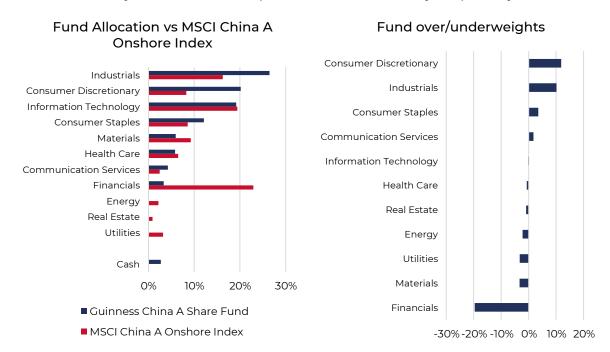

Portfolio Positioning

By theme, the Fund's largest exposures are to the Rise of the Middle Class, Manufacturing Upgrades and Sustainability. Important subthemes include Specialised Components, Home Improvements and EVs.

(Data as of 30 June 2025, source: Guinness Global Investors calculations. Data assumes portfolio is equally weighted)

On a sector basis, the Fund's largest exposures are to the Industrials, Consumer Discretionary and Information Technology sectors. Relative to the MSCI China A Onshore Index, the Fund is overweight in the Consumer Discretionary and Industrials sectors. The Fund is significantly underweight in Financials sector.

(Data as of 30 June 2025, source: Guinness Global Investors calculations, Bloomberg)

For the financial period ended 30 June 2025

Guinness China A Share Fund (the "Fund") (continued)

Outlook

With more investors looking to diversify away from the US, we argue China is an inevitable market to consider. Outside of the US, China has the largest number of quality and growing companies. Chinese markets can also provide investors with diversification opportunities within their portfolios due to their lower correlation with American markets. The Fund provides investors with exposure to quality, growing companies within China. This set of companies continues to be valued by the market at a very attractive valuation due to the sluggish macro environment in China. We expect by the end of 2026/early 2027, for China's new pillar industries to drive the economy forward, which may lead to a positive earnings revisions cycle for China and a valuation re-rating.

Despite China's substantial contribution to the global pool of quality and growth companies, the Fund's holdings continue to trade at attractive valuations. The Fund is currently trading on a forward year price earnings ratio of ~17x, below its long-term average of ~21x. The market remains concerned over the sluggish macroenvironment which we argue is driven by China's ongoing transition away from property and towards the new pillar industries. For the past few years, the drag from property has been greater than the contribution from the new pillar industries, meaning that in aggregate, earnings revisions have been continuously revised downwards in China. Absent any large tariff shocks we expect by the end of 2026/early 2027, the new pillar industries are to become large enough to offset the drag from the contraction in property. This should lead to earnings revisions eventually bottoming and then rising for China as a whole, which may lead both domestic and foreign investors to look at the market more seriously. Often equity markets move well before fundamentals shift, so we argue now is a good time to be looking to allocate to China, in anticipation of a valuation re-rating and new drivers behind the economy.

Guinness Multi-Asset Balanced Fund (the "Fund")

Performance summary in £ Sterling: Class Y

			Annua	ılised			Calendar years		
	6 month	1 year	3 years	5 years	2020	2021	2022	2023	2024
Fund	-2.5%	1.8%	6.4%	6.4%	2.0%	13.1%	-5.4%	8.6%	11.7%

The Fund, which launched on 28 December 2018, is designed to provide investors with long-term capital appreciation. It provides exposure to a range of asset classes, focusing on equities, fixed income and property.

The underlying funds invested in are mainly passive funds, but there is also some exposure to active products, particularly in the absolute return sector.

RBC Brewin Dolphin Limited, a leading UK wealth manager, are appointed as investment advisor to the Fund, providing advice on asset allocation and the choice of underlying funds. This advice is reviewed by the Guinness investment team, who are ultimately responsible for the make-up of the portfolios.

The Fund, which can invest up to 85% in equities, also aims to outperform IA Flexible Investment benchmark over the medium term.

In late January 2021, the Fund was repositioned from having a relatively high UK exposure to greater international exposure.

Review

The first half of the year was marked by significant volatility across global markets, driven primarily by geopolitical tensions and abrupt shifts in US trade policy, as well as evolving technological leader in Al.

The year began with cautious optimism but quickly saw volatility driven by renewed trade frictions, most notably with the U.S. imposing tariffs on Mexico, Canada, and a broad range of goods, rattling markets and threatening global supply chains. Reflecting these concerns, the University of Michigan's consumer sentiment index experienced a sharp decline.

The release of China's DeepSeek AI model, developed at a fraction of Western costs, challenged US tech leadership and contributed further to investor unease, especially hurting US information technology stocks in the first quarter.

In response to the challenging backdrop, the US Federal Reserve lowered its 2025 growth forecast to 1.7% and upped its inflation outlook to 2.7%, opting to keep rates steady in a balancing act between inflationary pressures and slowing growth.

Globally, market reactions varied. The Eurozone benefited from German fiscal reforms and China's tech progress, though US tariffs, particularly on autos, dampened some gains. UK large-caps in financials, energy, and healthcare provided market support, while small-caps lagged amid domestic uncertainty. Japan struggled with recession and tariff fears but found partial relief from policy support. Emerging markets experienced mixed fortunes: Mexico gained from a postponement of some US tariffs, while Asian markets, especially South Korea and China, saw advances thanks to stimulus and Al-led optimism.

Geopolitical volatility peaked in the second quarter with Trump's "Liberation Day" tariffs on April 2nd causing a brief sell-off in equities and a spike in bond yields. However, markets rebounded swiftly as the outlook for trade negotiations improved and a 90-day tariff suspension was announced. In the US, robust earnings and supportive fiscal stimulus through Trump's "One Big Beautiful Bill Act" supported a recovery in equities. International equities also advanced, with the ECB cutting interest rates twice and Emerging Markets benefitting from a weakening dollar and a pause in tariffs.

The Fund (Y class) returned -2.5% in GBP terms over the first half of the year, underperforming the IA Flexible Investment benchmark (+2.0%) by -4.5%.

Activity

In the first half of 2025, uncertainty around US government policies and growth fears resulted in the Fund exiting their position in the Xtrackers 2000. Similarly, tariff uncertainty and threats to reduce Medicaid funding led to the decision being made to remove the healthcare exposure and sell the iShares S&P 500 Health Care position. The decision was also made to close the Funds' position in the HSBC Global Semiconductor ETF.

Portfolio Positionina

A 1.5% increase in our weighting to Cash was funded by a 1.0% reduction in our Equities exposure and a 0.5% reduction in our weighting to Alternatives.

For the financial period ended 30 June 2025

Guinness Multi-Asset Balanced Fund (the "Fund") (continued)

Outlook

Equity markets have recovered from their February-April swoon, leaving investors to contend today with elevated valuations amidst policy and geopolitical uncertainty. We think that consensus earnings estimates for this year and next are robust enough to support those valuations as long as trade uncertainty doesn't bring the prospect for a U.S. recession back onto the table.

Three months ago, surveys of consumers, businesses, and investors offered up a pessimistic picture of the US economy, with a recession in the second half of 2025 or early 2026 deemed likely. Those sentiment surveys cited above have all improved somewhat but not fully, leaving a picture today where the downbeat moods of both consumers and company CEOs are offset by resilient spending by both households and businesses.

At the moment, the U.S. central bank looks to be wary of cutting rates ahead of a price shock it assumes will be coming thanks to tariffs. The same looks to be increasingly the case for other central bank policymakers.

And beyond the US, tariff upheaval has triggered a renewed interest in global equity diversification as a hedge against volatility in individual markets. We don't think the age of "U.S. exceptionalism" is over, but we do think the recent shifts in U.S. policy provide a catalyst to remove our overweight in US equities and return to a neutral position. The proceeds of this shift in allocation have been used to increase the Fund's weighting in cash, and to create a small overweight position in Europe ex UK equities. There is more scope for fiscal spending in Europe than in the US, and Germany intends to provide a big boost to defence and infrastructure spending.

Overall, equity markets today can withstand some near-term earnings disappointments, like those that might arrive in the wake of tariff (and counter-tariff) imposition in the second half of this year, as long as investors can remain confident of a 2026 full recovery. However, bouts of downside volatility can be expected along the way.

With the environment described, the Fund has adopted the following positioning:

- Overweight cash. The Fund holds a small overweight in cash, providing some ammunition to deploy when the outlook for other typically higher yielding asset classes improves.
- Equal weight bonds. The base case view is that safe haven bond yields move in a trading range in the quarters ahead, and that explains in large part why we have a neutral position in the bonds asset class. Within bonds, we are overweight government bonds, and underweight corporates. The yield differential between corporate and government bonds remains tight, and spreads are vulnerable to widen in the event that economic growth comes in weaker than the consensus expects. The reality is that recessions are often unpredictable, with 5 of the 8 recessions the US has had since 1970 caused by shocks. Government bonds would very likely outperform corporate bonds in the event of a negative shock to growth materializes. With spreads tight and given our desire to stick with a small equity overweight, the Funds bond positioning acts as a partial hedge against this risk.
- Overweight global equities. The global economy is expected to continue to expand, which is consistent with corporate profits going up. There is the potential for AI themes to drive both strong economy wide productivity and continued solid profit gains among the pick and shovel plays. However, we believe only a small equity overweight is appropriate. For one, there is limited room for cyclical economic growth. With most economies close to full employment and labour force participation high, there isn't much scope for workers on the sidelines to get a job, earn an income, and increase aggregate consumption. Meanwhile, US president Trump's immigration policies are likely to weigh on labour force growth. Further, US equity valuations are unappealing. Valuations don't work as a good predictor of medium-term returns, but eventually the medium-term becomes the long-term. Finally, trade uncertainty is very high, and surveys indicate a dearth of cash on the sidelines available to buy the recent dip in equities.
- Underweight alternatives. Following the recent strong rally in gold, we have taken some profits but retains a small overweight position. Importantly, if our base case economic outlook plays out, we see limited scope for real bond yields an important macro driver of gold to decline. However, a small overweight is retained. With the world becoming increasingly multipolar, central banks are expected to continue to diversify their reserve holdings out of the dollar and other developed world currencies. And gold is likely to act as a good hedge in the event that two risks materialize. One, if a full blow global trade war occurs, real yields would likely drop and inflation rise, a great backdrop for gold. The other risk is longer-term in nature, and that is if inflation comes in persistently above expectations due to factors like de-globalization, a changing age structure of society (that means fewer workers relative to consumers, resulting in strong wage growth), and persistently high government deficits. Finally, whilst we think it unlikely, gold would also perform strongly in the event of a Chinese invasion of Taiwan.

With spreads tight and given our desire to stick with a small equity overweight, the Funds bond positioning acts as a partial hedge against this risk.
- Overweight global equities. The global economy is expected to continue to expand, which is consistent with corporate profits going up. There is the potential for AI themes to drive both strong economy wide productivity and continued solid profit gains among the pick and shovel plays. However, we believe only a small equity overweight is appropriate. For one, there is limited room for cyclical economic growth. With most economies close to full employment and labour force participation high, there isn't much scope for workers on the sidelines to get a job, earn an income, and increase aggregate consumption. Meanwhile, US president Trump's immigration policies are likely to weigh on labour force growth. Further, US equity valuations are unappealing. Valuations don't work as a good predictor of medium-term returns, but eventually the medium-term becomes the long-term. Finally, trade uncertainty is very high, and surveys indicate a dearth of cash on the sidelines available to buy the recent dip in equities.
- Underweight alternatives. Following the recent strong rally in gold, we have taken some profits but retains a small overweight position. Importantly, if our base case economic outlook plays out, we see limited scope for real bond yields an important macro driver of gold to decline. However, a small overweight is retained. With the world becoming increasingly multipolar, central banks are expected to continue to diversify their reserve holdings out of the dollar and other developed world currencies. And gold is likely to act as a good hedge in the event that two risks materialize. One, if a full blow global trade war occurs, real yields would likely drop and inflation rise, a great backdrop for gold. The other risk is longer-term in nature, and that is if inflation comes in persistently above expectations due to factors like de-globalization, a changing age structure of society (that means fewer workers relative to consumers, resulting in strong wage growth), and persistently high government deficits. Finally, whilst we think it unlikely, gold would also perform strongly in the event of a Chinese invasion of Taiwan.

Notes to the financial statements

For the financial period ended 30 June 2025

1. General information

Guinness Asset Management Funds plc (the "Company") is an open-ended investment company with variable capital and segregated liability between sub-funds, incorporated in Ireland on 12 December 2007 under the Irish Companies Acts and the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations, 2011 (as amended) (the "UCITS Regulations") with registration number 450670. The Company is organised in the form of an umbrella fund. Each sub-fund has a distinct portfolio of investments. At the reporting date there are sixteen active sub-funds.

2. Material accounting policies

(a) Basis of preparation

The interim report and condensed unaudited financial statements of the Company for the six month financial period ended 30 June 2025 have been prepared in accordance with IAS 34 Interim Financial Reporting, the UCITS Regulations and the Central Bank (Supervision and Enforcement) Act 2013 (Section 48(1)) UCITS Regulations 2019 (the "Central Bank Regulations"). The financial statements have been prepared under the historical cost convention, except for financial assets and liabilities classified at fair value through profit or loss that have been measured at fair value. The financial statements have been prepared on a going concern basis.

The interim report and condensed unaudited financial statements do not contain all of the information and disclosures required in the full annual financial statements and should be read in conjunction with the audited financial statements for the financial year ended 31 December 2024, which have been prepared in accordance with International Financial Reporting Standards ("IFRS") as adopted by the European Union, the Companies Act 2014, the UCITS Regulations and the Central Bank Regulations. The interim financial statements are prepared using the accounting policies and methods of computation which were used in the annual audited financial statements.

The preparation of financial statements in accordance with IFRS requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of income and expenses during the financial period. Actual results could differ from those estimates and these differences could be material.

(b) Foreign currency

(i) Functional and presentation currency

The functional and presentation currency of each sub-fund is U.S. Dollar ("USD") with the exception of Guinness Multi-Asset Balanced Fund and Guinness Multi-Asset Growth Fund which both have a functional and presentation currency of British Pound ("GBP") and Guinness China RMB Income Fund and Guinness China A Share Fund which both have a functional and presentation currency of Chinese Yuan Renminbi (Offshore) ("CNH"). The Company has adopted the USD as its presentation currency.

(ii) Foreign currency translation

Monetary assets and liabilities denominated in currencies other than the functional currencies of the sub-funds are translated into the functional currency using exchange rates prevailing at the reporting date. Foreign exchange gains and losses resulting from the settlement of such transactions and from the translation at the reporting date exchange rates, of assets and liabilities denominated in foreign currencies are recognised in the statement of comprehensive income in the period in which they arise.

The foreign exchange adjustment was due to the use of exchange rates at the reporting date to translate sub-funds that have a functional currency that differs to the presentation currency of the Company. The translation of the sub-funds' functional currencies into the presentation currency of the Company is recognised separately within the total Company column through the statement of changes in net assets attributable to holders of redeemable participating shares and through the statement of cash flows. For the financial period ended 30 June 2025, the translation adjustment presented on the statement of changes in net assets was a notional loss of \$18,393,067 (financial period ended 30 June 2024: notional loss of \$1,423,274) and on the statement of cash flows was a notional loss of \$586,258 (financial period ended 30 June 2024: notional loss of \$1,423,274) and on the net asset value ("NAV") of each individual sub-fund.

(ii) Fair value of financial instruments

IFRS 13 – Fair Value Measurement establishes a fair value hierarchy for inputs used in measuring fair value that classifies investments according to how observable the inputs are. Observable inputs are those that market participants would use in pricing the asset or liability based on market data obtained from sources independent of the Company. Unobservable inputs reflect the Company's assumptions, made in good faith, about the inputs market participants would use in pricing the asset or liability developed based on the best information available in the circumstances.

The Company uses the following hierarchy for classifying and disclosing the fair value of financial instruments by valuation technique:

Level 1 - Inputs reflect unadjusted quoted prices in active markets for identical assets or liabilities that the Company has the ability to access at the measurement date;

Level 2 - Inputs other than quoted prices that are observable for the asset or liability either directly or indirectly, including inputs in markets that are not considered to be active; and

Level 3 - Inputs that are not observable.

Inputs are used in applying the various valuation techniques and broadly refer to the assumptions that market participants use to make valuation decisions, including assumptions about risk. Inputs may include price information, volatility statistics, specific and broad credit data, liquidity statistics, and other factors. A financial instrument's level within the fair value hierarchy is based on the lowest level of any input that is significant to the fair value measurement. Observable data is considered to be market data which is readily available, regularly distributed or updated, reliable and verifiable, not proprietary, and provided by independent sources that are actively involved in the relevant market. The categorisation of a financial instrument within the hierarchy is based upon the pricing transparency of the instrument and does not necessarily correspond to the perceived risk of that instrument by the Investment Manager.

For the financial period ended 30 June 2025

3. Financial assets and liabilities at fair value through profit or loss (continued)

(ii) Fair value of financial instruments (continued)

There were no transfers between any levels during the financial period/year ended 30 June 2025 and 31 December 2024.

The following tables provides an analysis of financial assets and liabilities that are measured at fair value, grouped into levels 1 to 3 at the reporting dates 30 June 2025 and 31 December 2024:

Cash and cash equivalents have been classified at level 1, due to the liquid nature of the asset. Other than cash and cash equivalents and the financial assets and liabilities disclosed in the table above, all other assets and liabilities held by the Company at the reporting dates 30 June 2025 and 31 December 2024 are carried at amortised cost. In the opinion of the Directors the carrying values of these other assets and liabilities are a reasonable approximation of fair value and they have been classified at level 2.

(ii) Financial derivative instruments

The derivative instruments that the Company holds or issues are forward currency contracts. The Company records its derivative activities on a mark-to-market basis.

A forward currency contract involves an obligation to purchase or sell a specific currency at a future date, at a price set at the time the contract is made. Forward currency contracts will be valued by reference to the forward price at which a new forward contract of the same size and maturity could be undertaken at the valuation date. The unrealised gain or loss on open forward currency contracts is calculated as the difference between the contract rate and this forward price, and this difference is recognised in the statement of comprehensive income. When a forward currency contract is closed, a realised gain/(loss) is recorded in the statement of comprehensive income equal to the difference between the value at the time the contract was opened and the value at the time it was closed.

For the financial period ended 30 June 2025

4. Cash and cash equivalents and bank overdrafts

For the reporting date 30 June 2025 cash and cash equivalents and bank overdrafts represents the cash balances, bank overdrafts and the investor money collection account held at Brown Brothers Harriman Trustee Services (Ireland) Limited (the "Depositary"). The below balances also include overnight deposits held with Eligible Institutions approved by the Custodian, Brown Brothers Harriman & Co. As at 30 June 2025, the Depositary had a credit rating of A+ (31 December 2024: A+).

When the sub-fund net asset value is less than the tier 1 value of \$500 million the fee rate for each share class is the tier 1 fee rate. When the sub-fund size exceeds the tier 1 value of \$500 million the fee rate for each share class is calculated as:

Average fee rate = (tier 1 fee rate x tier 1 value / sub-fund net asset value) + (tier 2 fee rate x (sub-fund net asset value – tier 1 value) / sub-fund net asset value)

For Guinness Multi-Asset Growth Fund and Guinness Multi-Asset Balanced Fund the fee for each share class is payable on the net asset value of the relevant share class at the following rates:

Share Class	Fee Rate
Class C EUR accumulation ¹	Up to 1.60%
Class C EUR hedged accumulation ¹	Up to 1.60%
Class C GBP accumulation ¹	Up to 1.60%
Class C USD accumulation ¹	Up to 1.60%
Class C USD hedged accumulation ¹	Up to 1.60%
Class O EUR accumulation	Up to 0.80%
Class O EUR hedged accumulation	Up to 0.80%
Class O GBP accumulation	Up to 0.80%
Class O USD accumulation	Up to 0.80%
Class O USD hedged accumulation	Up to 0.80%
Class R EUR accumulation ¹	Up to 1.80%
Class R EUR hedged accumulation ¹	Up to 1.80%
Class R GBP accumulation ¹	Up to 1.80%
Class R USD accumulation ¹	Up to 1.80%
Class R USD hedged accumulation ¹	Up to 1.80%
Class Y GBP accumulation	Up to 0.60%
¹ Effective 27 March 2025 there was a reduction of 0.20% on Management fees.	

For Guinness China RMB Income Fund the maximum permitted fee rates for each share class of the sub-fund for the management fee are set out below:

To Guilliess Chilla Rivid income fund the maximum permitted fee fates for each share class of the sub-fund for the management fee are set out below.				
Share Class	Fee Rate			
Class F EUR distribution	Up to 0.31%			
Class F GBP distribution	Up to 0.31%			
Class F USD distribution	Up to 0.31%			
Class Y CNH distribution	Up to 0.40%			
Class Y EUR distribution	Up to 0.40%			
Class Y GBP distribution	Up to 0.40%			
Class Y USD distribution	Up to 0.40%			
Class Y EUR hedged distribution	Up to 0.40%			

For the financial period ended 30 June 2025

5. Management fee (continued)

The Investment Manager shall be responsible for paying the administrative expenses of each sub-fund, to include establishment costs, fees and expenses payable to the Manager, the Investment Adviser (where applicable), the Custodian, the Administrator, including transfer agency transaction fees, all fees for investment research, Directors fees, any Paying Agent appointed by or on behalf of the Company, and general administrative expenses, which include but are not limited to legal and other professional advisory fees, company secretarial fees, Companies Registration Office filings and statutory fees, regulatory fees, auditing fees, translation and accounting expenses, taxes and governmental expenses applicable to the Fund, costs of preparation, translation, printing and distribution of reports and notices, all marketing material and advertisements and periodic update of the Prospectus, stock exchange listing fees, all expenses in connection with registration, listing and distribution of the Fund and Shares issued or to be issued, all expenses in connection with obtaining and maintaining a credit rating for the Fund or Classes or Shares, expenses of Shareholders meetings, Directors' insurance premia, expenses of the publication and distribution of the Net Asset Value, clerical costs of issue or redemption of Shares, postage, telephone, facsimile and telex expenses and any other expenses in each case together with any applicable value added tax.

Given the fixed nature of the management fees the Investment Manager takes the risk or benefit of any price changes to the cost of the services covered by the management fees and takes the risk of expense levels relating to such services increasing above the management fees as a result of a decrease in net assets. The Shareholders do not take any of this potential risk or benefit.

6. Sub-Investment Manager

For Guinness China RMB Income Fund, the Investment Manager will pay to EPIC Markets (UK) LLP (the "Sub-Investment Manager") a sub-investment manager fee out of the assets of the sub-fund. The sub-investment manager fee will be accrued at each valuation point and is payable monthly in arrears. The maximum permitted fee rates for each share class of the sub-fund for the sub-investment manager, are set out below:

Share Class	Fee Rate
Class F EUR distribution	Up to 0.14%
Class F GBP distribution	Up to 0.14%
Class F USD distribution	Up to 0.14%
Class Y CNH distribution	Up to 0.20%
Class Y EUR distribution	Up to 0.20%
Class Y GBP distribution	Up to 0.20%
Class Y USD distribution	Up to 0.20%
Class Y EUR hedged distribution	Up to 0.20%

Global Distributor's fee

Guinness Asset Management Limited (the "Global Distributor") shall be entitled to receive a distribution fee of up to 5% on subscription proceeds in respect of any Class C Shares, Class D Shares, Class O Shares and Class R Shares on each relevant sub-fund. The Global Distributor is also entitled to receive a fee in respect of Class Y Shares on each relevant sub-fund except for Guinness Multi Asset Growth Fund and Guinness Multi Asset Balanced Fund.

The Global Distributor fees relating to the financial period ended 30 June 2025 were \$2.191.332 (financial period ended 30 June 2024; \$2.262.980).

8. Administrative expenses

The below provides details of administrative expenses for the financial periods ended 30 June 2025 and 30 June 2024. The below fees were paid by the Investment Manager from the management fee during the financial period.

(i) Directors' fees

Aggregate directors' fees charged during the financial period ended 30 June 2025 amounted to €71,153 (financial period ended 30 June 2024: €70,170).

(ii) Management and administration fees

Where combined assets for the first eleven sub-funds in the umbrella are greater than €495m, the Manager is entitled to receive out of the assets of the Company a fee as detailed below. The below tiers are increased by €45m for any additional sub-funds.

For assets up to €495m
 For assets between €495-€750m
 For assets over €750m
 basis points per annum
 5 basis points per annum

Waystone Administration Solutions (IE) Limited formerly Waystone Fund Administrators (IE) Limited (the "Administrator") was paid by the Manager out of the fees which the Manager earned. The Administrator is also entitled to be repaid out of the assets of the Company, all of its reasonable out of pocket expenses incurred on behalf of the Company which shall include, inter alia, legal fees, courier's fees, telecommunication costs and expenses.

10. Share capital

Authorised

The authorised share capital of the Company is 500,000,000,000,000 shares of no par value and 2 redeemable non-participating shares of Euro 1.00 each.

Subscriber shares

There are two non-participating shares currently in issue which were taken by the subscribers to the Company and are held by the Investment Manager. The subscriber shares do not form part of the NAV of the Company and are thus disclosed in the financial statements by way of this note only.

Redeemable participating shares

Redeemable participating shares carry the right to a proportionate share in the assets of the sub-funds and the holders of redeemable participating shares are entitled to attend and vote on all meetings of the Company and the relevant sub-fund. Shares are redeemable by holders of the relevant share class at the respective NAV. Shareholders may redeem their shares with effect from any dealing day at the NAV per share calculated on or with respect to the relevant dealing day in accordance with the procedures specified in the relevant supplements.

13. Distribution

All share classes of the Company have obtained "Reporting Fund Status" under the United Kingdom Offshore Funds (Tax) Regulations 2009 for the purpose of United Kingdom taxation. Dividends may be paid out of the net investment income as declared by the Directors. Otherwise all income and gains of the sub-funds will be accumulated within the sub-funds. Where the amount of any distribution payable to an individual shareholder would be less than US\$100 the Directors in their sole discretion may determine that such amount shall not be distributed but shall be retained and reinvested within and for the benefit of the sub-fund. Income equalisation is applied to all share classes of the Guinness Global Energy Fund, and to distributing share classes of Guinness Asian Equity Income Fund, Class Y USD distributions paid from capital for any sub-fund during the financial period ended 30 June 2025 (financial period ended 30 June 2024: nil).

The following distributions were declared during the financial period ended 30 June 2025:

		Distribution per	Net distribution	Income received on	Income deducted on	Total distribution	Total distribution	
Class	Currency	share	charge	subscriptions	redemptions	(local)	(base)	Ex -date

For the financial period ended 30 June 2025

14. Related party disclosures and other key contacts

In accordance with IAS 24 'Related Party Disclosures' the related parties of the Company and the required disclosures relating to material transactions with parties are outlined below

Manager

The Manager is considered a related party to the Company as it is considered to have significant influence over the Company in its role as Manager. The Manager has delegated certain administration services to Waystone Administration Solutions (IE) Limited (formerly "Waystone Fund Administrators (IE) Limited") by way of a tri-party administration agreement between the Manager, the Company and the Administrator. The Manager and Administrator receive fees as set out in note 8. Total fees received for the financial period ended 30 June 2025 amounted to €2,188,716 (financial period ended 30 June 2024: €2,022,807).

Investment Manager

The Investment Manager was appointed by the Manager on behalf of the Company to provide investment management and advisory services to the Company. Directors, Edward Guinness, Andrew E. Martin Smith and alternate Director Timothy W.N. Guinness are employees of the Investment Manager. Each sub-fund pays the Investment Manager fees at the rates set out in note 5.

The Investment Manager is responsible for paying the administrative expenses of the Company, to include establishment costs, fees and expenses payable to the Manager and Administrator, the Depositary, independent auditor, directors' fees and general administrative expenses. Administrative expenses are paid by the Investment Manager out of the management fee. Given the fixed nature of the management Manager takes the risk or benefit of any price changes to the cost of the services covered by the management fees and takes the risk of expense levels relating to such services increasing above the management fees as a result of a decrease in net assets.

Details of fees charged are outlined below:

	30 June 2025	30 June 2024
	USD	USD
Management fees	41,819,684	38,097,048
Total	41,819,684	38,097,048

Distributor

Guinness Asset Management Limited, the Global Distributor was appointed by the Manager on behalf of the Company to promote and market the sale of shares and to use all reasonable endeavours to procure subscribers for shares. The Global Distributor shall be entitled to receive a distribution fee as outlined in note 7. The Global Distributor fee charged during the financial period ended 30 June 2025 was \$2,191,332 (financial period ended 30 June 2024: \$2,262,980).

Sub-Investment Manager

EPIC Markets (UK) LLP, the Sub-Investment Manager for Guinness China RMB Income Fund was appointed to act as a discretionary sub-investment manager to the Investment Manager in connection with the securities and other assets of the sub-fund. The Sub-Investment Manager shall be entitled to receive a fee as outlined in note 6. The sub-investment manager fee charged during financial period ended 30 June 2025 was \$4,270 (financial period ended 30 June 2024: \$4,201).

Directors

The Directors are also considered to be related parties. The Company pays the Directors remuneration for acting as Directors of the Company. Aggregate directors' fees charged during the financial period ended 30 June 2025 amounted to €71,153 (financial period ended 30 June 2024: €70,170).

Share transactions

At the reporting dates 30 June 2025 and 31 December 2024, the two non-participating shares taken by the subscribers to the Company were held by the Investment Manager.

For the financial period ended 30 June 2025

15. Transactions involving connected persons

Regulation 43 of the Central Bank (Supervision and Enforcement) Act 2013 (Section 48(1)) (Undertakings for Collective Investment in Transferable Securities) Regulations 2019 (the "Central Bank Regulations") requires that any transaction between the Company and its management company or depositary; and their respective group companies and delegates ("connected persons") is conducted at arm's length and is in the best interests of the unitholders of the Company.

The Manager is satisfied that there are arrangements (evidenced by written procedures) in place, to ensure that the obligations set out in Regulation 43 are applied to all transactions with connected parties and were complied with during the financial period.

16. Soft commission arrangements and directed brokerage services

There were no soft commission arrangements, directed brokerage services or similar arrangements in place during the financial period ended 30 June 2025 (financial period ended 30 June 2024: nil).

17. Fund Asset regime

The Company operates under a Fund Asset Model, whereby umbrella cash accounts designated in different currencies at umbrella level are held in the name of the Company. The umbrella cash accounts are used to collect subscription monies from investors and pay out redemption monies and also dividends (where applicable) to shareholders. The balances held in the accounts are reconciled on a daily basis and monies are not intended to be held in the accounts for long periods. The monies held in the umbrella cash accounts are considered an asset of the Company and are disclosed in the statement of financial position within cash and cash equivalent.

18. Efficient portfolio management

The below sub-funds entered into forward currency contracts for efficient portfolio management purposes in order to hedge the currency exposure of assets attributable to a particular Class into the currency of denomination of the relevant Class to non-base share classes with the exception of Guinness China RMB Income Fund which entered into forward currency contracts for efficient portfolio management purposes in order to hedge the currency exposure of investments held. A description of forward currency contracts and details of unrealised gains/losses are detailed in note 3 and open positions as at 30 June 2025 are also detailed within the schedule of investments. No collateral was posted. Losses from these transactions may arise from unfavourable changes in currency value of if the counterparties do not perform under a contract's terms. The table below shows the realised gains and losses, movement in unrealised gains and losses and transaction costs incurred on the purchase and sale of forward foreign currency contracts.

A Class will not be leveraged as a result of currency hedging transactions. Although the Company does not intend to over-hedge or under-hedge positions, over- or under-hedging may arise due to factors outside the control of the Company. However, over-hedged positions will not exceed 105% of the Net Asset Value of the Class and under-hedged positions shall not fall short of 95% of the portion of the Net Asset Value of the Class which is hedged against currency risk. Hedged positions will be kept under review to ensure that under-hedged positions do not fall short of 95% and over-hedged positions do not exceed 105%. The commitment approach was used to calculate global exposure.

19. Capital management

The redeemable shares issued by the Company provide an investor with the right to require redemption for cash at a value proportionate to the investor's shares in the subfund's net assets at each redemption date and are classified as liabilities. The sub-funds' objectives in managing the redeemable shares are to ensure a stable base to maximise returns to all investors and to manage liquidity risk arising from redemptions.

20. Changes to prospectus and supplements

Effective 1 January 2025, the Supplement was updated for Guinness Sustainable Global Equity Fund to take account of the sub-fund being renamed to Guinness Global Quality Mid Cap Fund.

Effective 18 February 2025, the Supplement was issued for Guinness Pan-European Equity Income Fund for the launch of the fund effective 19 February 2025.

Effective 27 March 2025, the Supplement was updated for Guinness Multi-Asset Balanced Fund and Guinness Multi-Asset Growth Fund to reflect the reduced Management for rates

Effective 1 May 2025, the Supplement was updated for Guinness Global Equity Income Fund for inclusion of the new share class Class Z USD Non-Reporting accumulation.

Guinness Asset Management Funds plc

For the financial period ended 30 June 2025

20. Changes to prospectus and supplements (continued)

Effective 1 May 2025, the Supplement was updated for Guinness Sustainable Energy Fund to address ESMA Guidelines on Fund Names.

21. Significant events during the period

Effective 2 January 2025, Guinness Sustainable Global Equity Fund was renamed Guinness Global Quality Mid Cap Fund.

Effective 19 February 2025, Guinness Pan-European Equity Income Fund was launched.

Effective 7 May 2025, Class Z USD Non-Reporting accumulation launched on Guinness Global Equity Income Fund.

The Central Bank Regulations requires all material changes that have occurred in the disposition of the assets of the UCITS to be documented in the report. A material change is defined as the aggregate purchases of a security exceeding 1 per cent of the total value of purchases for the financial period or aggregate disposals greater than 1 per cent of the total value of sales for the financial period.

Appendix 2 – Portfolio Turnover Ratio (PTR)

PTR is calculated as follows: ((purchases + sales) – (subscriptions + redemptions)) / average fund size

	PTR for 6 months to	PTR for 12 months to
UCITS calculation	30 June 2025	31 December 2024
Guinness Global Energy Fund	(26%)	(41%)
Guinness Sustainable Energy Fund	7%	(20%)
Guinness Global Money Managers Fund	(42%)	(64%)
Guinness Global Equity Income Fund	(35%)	(28%)
Guinness Asian Equity Income Fund	(25%)	(70%)
Guinness European Equity Income Fund	(19%)	(72%)
Guinness Global Innovators Fund	(28%)	(16%)
Guinness Greater China Fund	3%	(20%)
Guinness Emerging Markets Equity Income Fund	(8%)	(12%)
Guinness Best of Asia Fund	(136%)	(60%)
Guinness Global Quality Mid Cap Fund	26%	(42%)
Guinness Pan-European Equity Income Fund	14%	-
Guinness China RMB Income Fund	19%	47%
Guinness China A Share Fund	(66%)	(246%)
Guinness Multi-Asset Balanced Fund	8%	(1%)
Guinness Multi-Asset Growth Fund	4%	11%

PTR is calculated as follows: (lower of purchases or sales) / average fund size

	PTR for 6 months to	PTR for 12 months to
SEC calculation	30 June 2025	31 December 2024
Guinness Global Energy Fund	<u>-</u>	6%
Guinness Sustainable Energy Fund	12%	14%
Guinness Global Money Managers Fund	13%	34%
Guinness Global Equity Income Fund	6%	14%
Guinness Asian Equity Income Fund	15%	33%
Guinness European Equity Income Fund	10%	23%
Guinness Global Innovators Fund	4%	27%
Guinness Greater China Fund	12%	22%
Guinness Emerging Markets Equity Income Fund	10%	59%
Guinness Best of Asia Fund	12%	5%
Guinness Global Quality Mid Cap Fund	25%	20%
Guinness Pan-European Equity Income Fund	7%	-
Guinness China RMB Income Fund	-	-
Guinness China A Share Fund	7%	36%
Guinness Multi-Asset Balanced Fund	13%	28%
Guinness Multi-Asset Growth Fund	14%	25%

PTR is calculated as follows: full position sales/ average fund size

	PTR for 6 months to	PTR for 12 months to
SEC calculation	30 June 2025	31 December 2024
